F-35 and Military Spending

CASE STUDY

COLIN CHARPENTIER

charpcol@yahoo.com

Conclusion

In conducting the research on the F-35 it was found that while comparing cost data to capabilities the F-35 is not worth the money spent when compared to modern platforms. The data analysis is shown in lower sections.

Research Question

How does the F-35 Lightning II multirole fighter compare to current military airplanes in terms of costs and capabilities?

Background Information

This is a comparison study based around the F-35 and 5 other planes. The F-35 is chosen because of its status as an ongoing project and due to its controversy as a plane. This study looks at all values. It is completely numeric based allowing for objective analysis. These planes chosen for study are the F-16 C/D, F/A-18 E/F, F-22A, AV-8B Harrier II, and A-10C. These planes are chosen because the F-35

is meant to replace them in the case of all the planes except the F-22A.¹ In the case of the F-22A, it is the same generation as the F-35 and developed a bit earlier.² This will allow for the best comparison of information and make the study the most relevant.

<u>Relevance</u>

Case Study

This study allows for looking at the F-35 and comparing its value to that of current platforms.

This can act as a case study for military spending. In this case, deeming that the spending is not worth the value based on the objective capabilities chosen. This opens the doors to further questions.

Civilians and military members

This study is relevant for civilians and military members as well. This lets people know what the future of our national defense is. We're looking at the F-35, a plane currently in development. Then it also evaluates cost. This is important so military members can know how the defense budget is being spent and for civilians so they know how their tax dollars are being spent. Finally this is also relevant to these people for accountability reasons. That military members and civilians are able to evaluate if those in charge are making responsible choices and then held accountable for those actions.

Existing Research

<u>Costs</u>

The F-35 is a costly jet and research and comparisons have been done based on this. Instances of this are in HIS Jane's study, *FAST JET OPERATING COSTS*. This study compares multiple planes based

¹ "About the F-35," https://www.f35.com/about

² "F-22 Raptor," http://www.lockheedmartin.com/us/products/f22.html

on Cost Per Flight Hour (CPFH), a statistic I use later. This one study values the F-35 at a much higher CPFH then any of the other planes used, the F-35 being less favorable than other platforms in this study. An instance of total spending is the Barr Group Aerospace "U.S Military Aircraft Program" cost comparison, showing the F-35 at the most costly aircraft program. Many other studies or comparisons show this as well, giving the F-35 to be very expensive.

Capabilities

The F-35 is deemed capable and affordable by the USAF.³ Its logistics, stealth, and mission capabilities are all incredibly valued and seen as offering great potential to the national defense and coalition capabilities. Public opinions, which are retired military members or military related groups, find the F-35 to be less up to the task. Some call its munitions capability into question, citing a lack of ability for it to carry missiles when comparted to the F-22 or lack of ammunition for its main gun when compared to the A-10.⁴ Others question the F-35 and its ability to combat other fighters, a role it can serve. One source deems it lacking when compared to the F-22 and ill-suited for the potential role.⁵ Finally, some question it's capabilities in terms of future aircraft and performance.⁶ As it can be seen, the F-35 is a greatly debated plane.

Methodology

Sources

Sources chosen for finding information on this study are GAO publications, consulting

firms, US military databases, manufactures sites, and analyst sites. These sources were chosen because

they are believed to be the most relevant and factual. They all contained information related to the

numerical valued metrics chosen.

Data factors

Listed below are the factors chosen in the beginning of the study. A caveat of these

data points is that some proved more relevant then others later on in the study.

CPFH: Cost per flight hour is use of fuel, pre-flight preparation and repair, and scheduled maintenance

and personnel costs.7

Program Cost: Program cost is the cost of procurement and research and development.8

Cost per unit: Cost to acquire one unit, normally taken as a division of total cost divided by units.⁹

Payload: The amount of munitions an aircraft can carry. 10

Hard points: External point on airframe capable of carrying external load, munitions or fuel. 11

Ferry Range: Range with minimal munitions and maximum fuel. 12

⁷ Hunt, Edward. "FAST JET OPERATING COSTS." *IHS Jane's* 13 Mar. 2012. Web.

⁸ "Analysis of the Fiscal Year 2012 Pentagon Spending Request" National Priorities Project 15 Feb. 2011. Web.

⁹ "Analysis of the Fiscal Year 2012 Pentagon Spending Request"

¹⁰ "Payload" *Dictionary.com* Web.

¹¹ "Hardpoint" Wikipedia Web.

¹² "Range (aeronautics)" Wikipedia Web.

4

Combat radius: Range with munitions load and ability to maneuver on site.¹³

Maximum Speed: Top speed of the aircraft.

Cruising speed: Speed an aircraft can maintain for extended periods of time, most efficient.¹⁴

Total Force: Amount acquired or planned to acquire.

Ceiling: How high the plane can fly.

¹³ "Range (aeronautics)" Wikipedia Web.

¹⁴ "Cruise (aeronautics)" Wikipedia Web.

Data Manipulation

In this study data was manipulated in a number of ways. One was via charts, as can be seen below.

| Range (NM | | |
|------------------|---------------------|-------------------|
| | | |
| <u>Planes</u> | <u>Ferry</u> | Combat |
| F-35 | | |
| | 2,172 ¹⁵ | 560 ¹⁶ |
| | | |
| F-16 | | |
| | 1,740 ¹⁷ | 295 ¹⁸ |
| F/A-18 E/F | | |
| | 1,660 ¹⁹ | 390 ²⁰ |
| F-22 | | |
| | 1,608 ²¹ | 410 ²² |
| AV-8B Harrier II | | |
| | 1,792 ²³ | 300 ²⁴ |
| A-10 | 25 | 26 |
| | 2,242 ²⁵ | 250 ²⁶ |

And another was more visual based, via graphs. This too can be seen below, representing the same data as above.

¹⁵"F-35 Lightning II Joint Strike Fighter" Barr Group Aerospace Web.

¹⁶ "F-35 Lightning II Joint Strike Fighter"

¹⁷ "F-16 Fighting Falcon" *US Air Force* Web.

²⁶ "A-10 Thunderbolt"

In this way data was manipulated to show side by side comparisons. Finally data was manipulated to show it against cost data. Examples below are shown comparing CPFH and Cost per unit to Payload and Combat radius, what I believe to be two key statistics to combat capability of an aircraft. Note, that in valuing statistics a higher number is better. Formulas are Combat radius or payload divided by cost value.

| <u>Planes</u> | <u>CPFH</u> | Payload (in pounds) | Payload to CPFH | Combat | Combat Radius to CPFH |
|------------------|----------------------------|---------------------------|--------------------|--------|-----------------------------|
| F-35 | \$ 32,000 ²⁷ | 17,000 ²⁸ | 0.5 | 560 | 0.018 |
| | | | | | |
| F-16 | \$ 7,000 ²⁹ | 17,200 ³⁰ | 2.5 | 295 | 0.042 |
| F/A-18 E/F | \$ 17,700 ³¹ | 17,750 ³² | 1.0 | 390 | 0.022 |
| F-22 | \$ 19,000 ³³ | 6,325 ³⁴ | 0.3 | 410 | 0.022 |
| AV-8B Harrier II | \$ 11,134 ³⁵ | 9,200 ³⁶ | 0.8 | 300 | 0.027 |
| A-10 | \$ 17,716 ³⁷ | 16,000 ³⁸ | 0.9 | 250 | 0.014 |

Findings

As can be seen in the 2 tables and 4 charts above, the F-35 does not compare favorably to other existing 4th generation aircraft. This evaluation holds true when comparing cost data to other

sources. This would allow for the conclusion, based on the data presented and examined, that the F-35 is not worth the cost.

Assumptions

Values are assumed to be correct in all instances of this study. Possible room for variations is in the accuracy of values the sources have; that is the most current data. Other sources could be if calculations of numbers by sources are varying from other sources.

Future Research

Further research could be done in to more extraneous factors. Looking at what new technologies generation 5 aircraft have over generation 4 would be one example. Others would be looking at mission set and determining value there, looking to see if it allows for better cooperation with coalition partners, impact on economies, and if future improvements to generation 5 and 4 aircraft change the values of those aircrafts. Subjective factors could also be researched, such as likability, likability, pilot preference, and factors similar to that.
