INTRODUCTION - TEACHING SCENARIOS

Welcome to the television program "A Slice of School" where the producers of the show put secret cameras into various elementary school classrooms to show the American public examples of what types of things are really going on behind the closed doors of their schools. Today's show begins in a classroom in Minneapolis, Minnesota at Morningside Elementary. Before the hidden cameras were installed in the classroom of Ms. Bongaarts, rumors had been made about her classroom. Her room has been known as the noisy room; she is said to be a "whole language" teacher. This is what "A Slice of School" found out when they went behind closed doors...

It is eight o'clock in the morning and the second graders in Ms. Bongaarts' class settle down for their story of the day. Ms. Bongaarts knows that many of the students became curious about plays after they watched the fourth graders perform a play. After the performance the second graders had told Ms. Bongaarts that they too, would like to put on a play. So now, Ms. Bongaarts picks up a picture book called Amazing Grace (Hoffman). After discussing the author and where the book was published, she asks them to make predictions after just looking at the cover of the book. Katie Jo speaks up and says, "I think it is going to be about a girl who knocks out her two front teeth since the girl on the cover does not have any teeth." Other predictions are made while Ms. Bongaarts puts their ideas on the board with each child's initials by
their remarks. Ms. Bongaarts redirects the children's attention to the story and reads only the first page. Ms. Bongaarts stops again and asks the students if they would like to change their predictions. They also brainstorm about everything they know about acting and plays since the story is about plays. Finally, Ms. Bongaarts begins to read the book entirely through with expression and zip.

Ms. Bongaarts then asks how many enjoyed the story and if they liked Grace the main character. Kyle raises his hand and says, "My Grandma tells us stories about the days when she drove the streetcar." Other children follow suit and soon there is a lively discussion about plays and related personal experiences.

After the discussion the students are invited to retell the story to a partner in their own words and then together they reread the book. At the end, the children learn about summaries. They decide that the summary of this story is that it is about a girl named Grace who enjoys stories and acting, and through hard work becomes the star of her class play.

With that, Ms. Bongaarts says that they would begin their own unit on theater. She explains that they would be putting on their own play, going to a play at the local theater, and writing plays. Soon the class is buzzing about with partners researching various topics from encyclopedias and other materials about theaters. One group reads about what theater is from two different encyclopedias with help from the
teacher. Another student decides to reread the book *Amazing Grace* and write about what feelings Grace had in the story (Hoffman). (In Appendix A there are examples of authentic text that these children might have read in this particular classroom) Ms. Bongaarts also explains how they would be responsible for sharing with the class what they found out about theaters.

For the next few weeks the children change what was Room 202 to the Morningside Theater Company. They write plays and decide on one play to perform. They also realize they would have to learn something about measurement so that they can make a stage. They use language arts, science, math, and music skills to get the classroom play in order. The television cameras picked up Miss. Bongaarts in the classroom providing materials and assisting; the room looked and sounded like a sports team practicing. In the next school portrayed in "A Slice of School" a contrasting type of teaching style is found.

The hidden cameras are next placed in a school a few miles from the last location. The background information and rumors about this classroom are more familiar. It is known that the teacher in this room uses more traditional methods of teaching and also uses a basal reader to teach reading and language arts skills. The cameras are turned on and this is what is seen...

In this second grade classroom the students are sitting
in even rows and no one is talking at the present time except for the teacher, Mrs. Smith, who is at the front of the room. She is holding a heavy book in her arms that she refers to as her manual and her "Bible." She begins her reading lesson by telling the children that today they are going to be learning and reading about plays. The camera zooms in on her manual and it looks as if Mrs. Smith is reading exactly what is in bold print in her manual.

The children are asked to get out their reading textbooks and turn to a play about animals. Each student reads one sentence aloud until the play is completed since there are not enough play parts for everyone. But at the end of each page, Mrs. Smith stops the reading and asks various questions. The cameras notice that she reads exactly the prepared questions from her manual. (An example of a this type of teacher’s manual page is in Appendix B)

After the play is read the children are asked to complete a workbook page on vocabulary words. This workbook page introduces vocabulary words not found in the text from the play they have just read. Rather it uses words the students should know using unfamiliar context. (See Appendix C for an example of this type of workbook page) The teacher then corrects the page and takes each child’s score down in her record book. It is nine thirty and time for forty minutes of math.

The reader of this paper has just had a chance to
visualize two contrasting classroom teaching scenarios that are typical of many classrooms today. The first scenario was created with a teacher who draws her beliefs about learning from the whole language philosophy while the second scenario was developed with a teacher who uses a philosophy that teaches reading using basal readers and a more traditional approach. In this paper, I will explore the whole language teaching philosophy and instructional strategies. The whole language teaching approach can be an effective way to teach the language arts and other subject areas. I will defend that statement with an exploration of the general characteristics, the foundations of the whole language teaching philosophy, and an application of a broad whole language strategy, literature-based thematic units. The goal of this paper is not to compare the two different teaching approaches described in the introductory scenario. Rather, the two vignettes were shown to give the reader a clear picture of how a whole language lesson is taught in contrast to a traditional reading lesson. The focus of this paper is on one of those whole language approaches. It is important to analyze this educational philosophy because of the impact the instructional strategies can have on learners and its recent popularity in the United States.

GENERAL CHARACTERISTICS - INTRODUCTION

Educators have seen many trends come and go. Decades are marked with major practices that exemplify different periods
of educational history, thought, and theories in the United States and around the world. For example during the 1960's and early 1970's the "open classroom" was one way that classrooms were structured. Today, a recent trend has been to structure the class by implementing the whole language philosophy. As this paper will show, the concepts that underlie the whole language philosophy can be noted in some philosophers' works as far back as the 1600's. The ideas are not new, but the way in which they have been presented and developed are new. The potential longevity of the whole language approach can be seen in its widespread use by educators in New Zealand and Australia. Educators in those countries have been practicing whole language for thirty and twenty years respectively. Within the last ten years the practice has been used by Canadian and American educators. With what appears to be a stable philosophical foundation, the whole language "trend" may become normative in classrooms. Before the early historical roots can be explored, it is necessary to sift through the various research and writings on whole language so that a working definition of whole language can be established for this paper.

The whole language approach to teaching is an educational philosophy about how to best teach students, how students learn, the most appropriate instructional materials, and the creation of the classroom environment. The basic tenets of the philosophy have been stated as:
1. A Holistic approach to the development of literacy.
2. A belief that language is central to human learning.
3. A belief that learning is easiest when it is from whole to part, when it is in authentic contexts, and when it is functional for the learners.
4. A belief in the empowerment of learners and teachers.
5. A belief that learning is both personal and social and that classrooms and other educational settings must be learning communities.
6. A positive view of all human learners.
7. An acceptance of all learners and the languages, cultures, and experiences they bring to their education.
8. A belief that learning is both joyous and fulfilling. (The Whole Language Advocate 2).

Throughout this paper many concepts, beliefs, and activities are based on these aforementioned original tenets of the philosophy. It would be impossible to generalize all of the concepts and activities that characterize the whole language philosophy, but it is important to get a broad picture of what the philosophy involves. What follows is intended to provide that broad picture.

LANGUAGE LEARNING BELIEFS

One underlying belief of the whole language philosophy is that natural language learning should be a vital part of one's education (Goodman Whole 7). Natural is understood to mean that when children learn how to use language at school, that language use needs to be purposeful, age appropriate, and conducive to use at home. An example of this would be a primary aged child playing house with fellow classmates. The teacher invites the children to visit the play grocery store at the other end of the room, but first the children must write out a grocery list. The children are using language skills to develop their list. Most children have seen their
parents make grocery lists at home and may have helped in developing the list at home. Like the scenario suggested, the learning environment needs to be similar to the real world so that there are natural similarities between the two. The whole language perspective is deeply rooted in providing authentic language learning experiences so that a child will be able to use what he or she learns in school in daily life. An example of a writing task from an unauthentic perspective would be if a teacher told students to write a creative story about why spiders have so many legs in isolation, rather than during a study on spiders.

This belief in natural language learning has been developed from looking at linguistic development with infants (Goodman Whole 16). Infants do not learn to talk from a workbook or from direct instruction. Rather they communicate their needs and interact with their parents and other caregivers with some form of purposeful communication. Children see and hear others communicating in regular patterns. An example of this would be a child using intonation at the end of a question after hearing a brother or sister doing the same. From modeling and meaningful feedback a child begins to speak and communicate.

Ken Goodman, who has done an extensive amount of research and writing on this philosophy wrote about the importance of language,

Children are literally driven to learn language by their need to communicate. Sure, human beings
are endowed with the ability to think symbolically. But actual language development is a matter of survival. At birth we are totally helpless. We depend for survival on our ability to get the attention of those around us (Goodman Whole 15).

Effective language use is a prime thrust of whole language because of the importance of communication in the everyday world.

Children need to use language to communicate, but also normal language use is the stem from which other information is learned. When children begin to read and understand a recipe to make a cake, for example, they begin to understand measurement and sequencing from the language on the recipe card. They need language to understand math concepts, musical words, and in all subject areas. Children need language not only to communicate, but to understand other subject areas as well (Cullinan 426). That is why the whole language philosophy puts such a heavy focus on purposeful language use and development so that the child can transfer language skills to help understand any subject.

ROLE OF THE STUDENT

The students are the focus of whole language teaching. Whole language teachers believe students will learn when they actively interact with the materials and information being presented (Weaver 22). When student-centered lessons and activities are developed, students' abilities are used and challenged to understand a concept. If students manipulate ideas and materials, interact with and are stimulated by
meaningful learning experiences, they are more likely to use all the modes of communication and are more likely to be intrinsically motivated to learn. An example of this is when the students read about plays, write their own play, and perform their play with limited direction from the teacher. The students' roles in a whole language classroom can best be described by the two words - active learners.

Students also play an important role in the whole language classroom because they also help the teacher to design and decide on the content of the curriculum. The teacher can enhance student motivation by taking student interests along with district and state goals and outcomes to create a meaningful curriculum of study with the child as the main focus. This results in the students having ownership, responsibility, and taking active engagement in the activities.

Students in a whole language classroom take charge of their learning in a variety of ways as well. Jerome Harste and Kathy Short in *Creating Classrooms for Authors*, write about using student partnerships to increase natural language use at school. In some cases older school children work with younger children. They read, write, and do other meaningful tasks together. Students feel ownership in the activity. Students also become the editors, publishers, and listeners for the other students in the class. Rather than just having the teacher give comments on students' writings, other
classmates listen and read another child's text and give suggestions. Students also are typically given choices in the mode and the type of activity they want to work on which further makes the student an active participant. The whole language teacher and classroom would be non-existent if they did not have active student participation, involvement, and direction.

MATERIALS USED

As shown by the introduction perhaps the most visible difference between a whole language classroom and a basal or textbook orientated classroom is the instructional materials used. Emphasis is given to the quantity of print and the quality of the print available in a whole language classroom. Whole language teachers prefer using authentic reading materials rather than commercially published basal readers which contain stories written to suit a readability formula or to represent words with certain grapho-phonic principles. Authentic reading material is derived from trade literature, magazines, newspapers, nonfiction reading, children's own writing products, and many other sources of print in a whole language classroom. The room becomes "print rich" and students become familiar with many different types of print (Weaver 83). In contrast, basal readers remain in use in traditional classrooms. Basal readers are typically confined, constrained collections of stories that lack the elements of a good story. In Appendix D there is an example of a story in
authentic form as well as a basalized version of the same story. The basalized version lacks most of the expressive and beautiful language and plot that the authentic story contains.

Recently, however, many textbook companies have been taking one chapter from a well known children's book and putting it into a traditional basal, but calling their new textbook "whole language." This violates the whole language philosophy since the whole book needs to be used and manipulated by the students so that a child experiences a real story from start to finish. Children need to read and become acquainted with intact books as they would come across them at home and in their adult life.

Almost all children can drift easily into the world of a story that is being read to them or that they themselves are reading. That is one of the reasons why real books or trade books are an essential part of any whole language classroom. Children are motivated to learn how to read and make sense of the symbols they encounter after they see others being delighted by a good story or enlightened by a news article. The interest level of reading for children can be sparked even more in a classroom that contains good children's literature. "Good" children's literature enables children to learn about different genres, elements of literature, and the composition of writing. The use of real literature as part of any whole language program is best summarized by Cullinan, "The language of literature becomes the heart of reading and writing
programs; thus, whole language and literature are inseparable" (426). A major task of whole language teachers then, is to sort through all of the children's literature that is published to find quality literature.

CLASSROOM ENVIRONMENT

In the scenarios provided at the beginning of this paper another difference between a whole language classroom and a traditional classroom was shown, the classroom environment. There are generally two main parts to the classroom climate: the social-emotional element and the physical element. Both are vitally influenced by the teacher's instructional philosophy.

In a whole language classroom environment the teacher uses activities and actions which will provide a warm and risk-taking climate. Each child needs to feel secure in the classroom environment in order to really be able to focus on learning. Whole language teachers insist on and provide this environment for the learner. One way that the environment can be created is by the attitude of the teacher, "In whole language classrooms, children are treated as capable and developing, not as incapable and deficient" (Weaver 25). Another way to create a risk-taking environment is to look at many different pieces of a child's work so that progress can be seen rather than evaluating the child on one isolated piece of work. Perhaps the biggest part of creating this type of classroom comes from a positive and genuinely optimistic
attitude about learning from the staff and teachers of the school.

Another aspect in creating a positive social-emotional classroom is to provide activities that boost self-esteem. One way to do that is to avoid ability groupings. In a whole language classroom, flexible groups (i.e., temporary groupings) are used to bring students with the same interests or skill needs together. This contrasts sharply with the traditional use of fixed groupings for the entire year. Fixed ability groups convey the message to students that the students who are in the lower group might remain there for the year and never get any better while the higher achievers will always be considered the brightest in the class (Cochrane 134). In a whole language classroom, individuals' needs are frequently assessed and flexible groupings are made on the basis of the assessments. Groups of children are not only formed because of what type of assistance is needed, but also to boost and enhance positive social interactions. This belief stems from the underlying tenets that learning should be "joyous and fulfilling," that students are taught in a "positive view," and that learning "is both joyous and fulfilling" (The Whole Language Advocate 2).

The physical setup of a classroom plays an important role in the total environment of a classroom. When children are actively discussing, editing, publishing works, strict quietness is impossible. The room is a beehive of activity.
Students are constantly buzzing around engaging in learning activities. The physical make-up of the room needs to allow for this type of work and energy. Strict rows are not suitable in a classroom where students are using various materials and learning arrangements to learn. Some of the components of the room should be a place for small group work, a quiet area for independent reading and working, a listening area, dramatics area, classroom library, and a place for whole group instruction. The whole language teacher needs to consider both the physical set up and social emotional climate of the classroom in order to make each child comfortable for learning.

ROLE OF TEACHER AND INSTRUCTIONAL TECHNIQUES

In a traditional classroom, the teacher tends to be at the front of the room delivering information and controlling the class with threats and promises. In contrast, a whole language classroom teacher might not be immediately spotted if a person was to pass by the room. The teacher might often be found blending in with the children monitoring and working with what was being pursued. Whole language teachers "facilitate productive interaction among children" so learning can occur for every student and so that they can learn from each other (Weaver 25). Creativity, a broad knowledge of reading materials, and organization of materials are key factors to a successful whole language teacher. Instead of reading each direction, idea, or teaching strategy from a
manual, a whole language teacher depends on personal preparation, intuition, research, and extensive reading to plan student activities.

When whole language teachers plan their instruction, efforts are made to teach the children from "whole to part" rather than "part to whole" (Goodman Whole 19). (See Figure 1)

Whole Language Advocates typically begin with the larger units of information rather than the smaller units of information. (Adapted from Developing Integrated Curriculum Units (1990) by Kath Murdoch et al.)

Students begin to read and have read to them entire stories rather than focusing each sentence or word on each page initially. First, a whole concept or story, is presented. Then, as needed, focused instruction is provided on individual skills. For example, during a primary reading lesson a well know children’s book might be read aloud like Brown Bear, Brown Bear (Martin). After reading the entire book many times through, the teacher might introduce the letter "B" and then help the students identify the letter "B" in the story.

Direct instruction by the teacher comes into play when
students or the teacher discover that a concept needs explaining because it is pertinent for students' understanding. For example, during a writing lesson, students write about a conversation they had with a friend. They realize that they need punctuation to show dialogue. Then, the teacher interjects a lesson on quotations and other important punctuation.

Another important role of the teacher in any classroom is that of a model. One difference that might be observed between a traditional classroom and a whole language classroom is that the teacher participates in the activities as well. If there is time given for independent reading, the teacher also will take time out to read rather than going about other business. The teacher is modeling life long reading skills and becomes a co-learner with the students. The teacher is modeling to take time out from adult life to read as well as showing respect for the activity by participating with the students.

Another part of the teacher's role in whole language is to be extremely well read. In order to plan, suggest, and use a variety of print sources, the teacher needs to be knowledgeable of sources. Without a wide variety of known materials and bank of reading materials, the teacher has lost the backbone of the whole language lesson.

INTEGRATION AND THEMATIC TEACHING

Another key characteristic of a whole language classroom
is the integration of subjects by using thematic studies rather than strict time periods for individual subjects. The underlying whole language philosophy tenets—that literacy can be developed through holistic practices and when learning is functional for the learners—provide the base for using this type of strategy. Thematic teaching is a broad strategy to attain curriculum integration. A broader definition of thematic teaching is included in a later section of this paper. With all of the curriculum demands that governments and districts make of schools, it is impossible to do justice to any one subject when, for example, a time limit of a half hour is given. In a whole language classroom a central theme helps to minimize the typical structured daily schedule with time blocks for each subject. Rather, there are extended time periods where all of the subject areas are brought in to discover and learn concepts from a related theme. In a Appendix E, there is a brief outline of two possible schedules from a thematically integrated type of structured classroom. A detailed schedule is also included to show how many of the subject areas are integrated during the days and weeks during the study of a particular theme. In Appendix F there is a thematic web which shows how many subject areas and topics can be addressed from a single theme.

Using thematic teaching to integrate any or all subject areas helps students make connections on a given topic. This strategy is primarily based on Piaget’s schema model of
learning (Pappas et al. 25). Schema are what Piaget associates with the "chunks" of knowledge that are learned which are then organized into larger related fields of knowledge. People are constantly adjusting their schema--adjusting what they learn.

What we learn at any time is always based on what we already know. This knowledge is not a mere accumulation of out-there facts about the world picked up by osmosis, by passive absorption like a sponge. Instead, knowledge is actively constructed by individual minds (Pappas et al. 23).

Integrating curriculum materials and using thematic units helps to create a rich background of knowledge on topics so that further learning on the same topic can be assimilated more easily.

The thematic way of teaching is one of the broad whole language strategies which exemplifies the whole to part theory of this philosophy. It can become a more efficient teaching style in that with thematic organization, teachers can also address the goals and outcomes for several curriculum areas. Minnesota has developed various outcomes that students should achieve while in school. The outcomes are in all of the various subject areas. Different outcomes from different subject areas can be addressed at the same time; this could be achieved by using integration or thematic units of study. In Appendix G there are some examples of Minnesota Language Arts Model Learning Outcomes. There is also a diagram showing how the different outcomes are interrelated. One of the outcomes shown, states that students will use writing for a variety of
purposes. This outcome could be achieved in various subject areas, thus different writing purposes, while doing a thematic study. Integration and thematic teaching allows the teacher and student to achieve many different outcomes from different areas during the study.

EVALUATION

Any educational philosophy has approaches to measure a student’s growth and learning. Evaluation is important in order to monitor if what is going on in schools is actually beneficial. It is very difficult in the present American education system to get away from the stress placed on traditional standardized tests and grades. Whole language advocates, in contrast, have used many different strategies to show children, parents, and others what learning is occurring.

One way is through portfolios. Each student collects various work samples throughout a time period and keeps them in a personal portfolio. Portfolio enclosures are typically whole work samples rather than tests which evaluate students on isolated, discrete skills. Portfolios symbolize the beliefs of whole language teachers since this type of evaluation looks at a wide sampling of work by the student rather than using one test score to show how the child is doing. The student, parent, and teacher can see how a child learns, progresses or regresses, and how much effort is given on assignments throughout the year or during a given time frame. Some work samples that are a part of the portfolio
might be writing samples from throughout the year, cooperative work that was done with other students, and drawing samples. Included in the portfolio could be a videotape of special presentations or an audio tape to help see how the child is doing in special communication skills.

Another assessment tool is an anecdotal log or checklist of teacher comments. Periodically during the day a teacher documents observations of children in a classroom log. Work habits, special concerns, and other observations are written down to help describe and assess each child. In Figure 2 there is an example of what types of comments a teacher might make in the log.

Figure 2 - Possible example of observations in log

Smith, John

9/18 Worked well with small group on play writing
9/30 Worked alone on choice activity of designing scenery for
10/10 Worked alone on new activity
10/22 Orally read well with great fluency during play practice
11/2 Got angry when asked to join a group rather than working alone. Discussed his feelings on matter. Is having trouble working with Kyle and Ben. Solved problems through a talk.
11/10 Worked with a partner to complete activity.

If John Smith's parents inquire about his cooperation skills, the log becomes one way that the teacher can show areas of concerns or successes. A log also becomes important when a teacher speaks about the child during a parent-teacher conference or to other school officials; the teacher has documentation to provide the parent or official.

Self-evaluations by students are also another important
aspect of evaluation (Hood et al xiii). Students rate themselves on effort given to tasks, understanding of material, and they set goals for future activities. Filling out a survey after a project or writing a brief self-evaluation teaches students the valuable life-long skill of being responsible for one's own work. This is holistic in that it gives students some control and responsibility for their work.

There are many other holistic ways of getting away from the exclusive use of traditional tests, that infrequently do not test higher level thinking skills or that do not allow for different modes of test taking. An important point is made by a whole language advocate, "whoever controls assessment in effect controls education [and] in order to reclaim their classrooms as places where genuine learning and teaching can take place, teachers must reclaim assessment and accountability" (Weaver 210). Teachers are the ones providing instruction; they know the children. When tests are used, they might be generated and created by the teacher so that emphasis is given to higher level thinking questions and appropriate content. Assessment does not occur on one day or every few months, rather it "is an ongoing part of instruction" (Harp 2).

EARLY HISTORICAL SIMILARITIES

INTRODUCTION

In order to fully understand the characteristics and
practices of a whole language teaching program, it is necessary to look at similar beliefs of early educational philosophers. Many historical thinkers' ideas contain the roots of the whole language philosophy (Goodman Didn't 190). Although these philosophers lived years ago and they themselves had no idea of the term whole language, their ideas and writings reflect parallel goals. By briefly looking at the education beliefs of a few educational philosophers, the whole language philosophy becomes better established.

JOHN DEWEY (1859-1952)

John Dewey's role in the progressive education movement of the late 1800's and early 1900's was immense. In his suggestions for educational reform, he explained and developed some concepts which are similar to today's whole language beliefs. His many essays, writings, and teachings during the turn of the century are very compatible with today's world. Social changes in the United States at the turn of the century caused much turmoil. New machines were making the world an easier place to live, but the education system needed to prepare the young for this complex world. Presently with the turn of the century seven years away, the modern world changes dramatically each day. Young students need to be prepared to handle these changes.

Dewey's ideas which could lay the foundation for the whole language philosophy are best summarized by one editor's opening remarks on one of Dewey's essays, The Child and The
Curriculum and The School and The Society. The editor writes,

Dewey was at the forefront of the battle to abolish
the old tradition that the schools which society
supports were merely charged with the somewhat static
duty of handing on to each new generation a relatively
fixed body of subject-matter items. He was anxious
to consider the child who was being educated. In a
few years, throughout the world, his name, therefore,
become synonymous with the advocacy of the child-centered
school and of the school that gave full emphasis to real
interests and to learning through doing (Dewey viii).

Dewey believed that children became confused about what they
learned in school because the subject matter had nothing to do
with what they experienced at home or in their environment.
He advocated for a school which individualized the curriculum
for each student (Dewey 33). Each child would learn if they
actually had to manipulate a process or objective in a real
setting and stemming from an intrinsic motivation of the
child. Today, whole language proponents also advocate that
real learning occurs in real world situations.

Dewey recognized that children learned much about the
world around them and others at home. Dewey suggested that
the home is a perfect blueprint for a school (Dewey 35). In
a home setting children inquire about things around them,
touch things, try things out, communicate about things,
eventually learn new things, and make connections with old
concepts. Dewey continued to describe why schools confuse a
child by noting the isolation of skills taught in schools.
Children cannot use their everyday experiences of home and
neighborhood to reinforce what is learned in school. Not all
of the things learned in school are necessary for life at
home. Children cannot make connections between home and school, since the things being learned at the two are often incompatible. Dewey summarizes this idea in his book by saying, "[In a school] the primary waste is that of human life...because of inadequate and perverted preparation" (Dewey 64).

To cure the educational flaws, Dewey suggested making schools similar to the modern day vocational school. Dewey believed that students learn by doing, not memorizing or listening. His school would provide experiences in science outdoors which require active involvement and touching in the environment rather than reading about it from a book. About literature and language, Dewey wrote,

Language is almost always treated in the books of pedagogy simply as the expression of thought. It is true that language is a logical instrument, but it is fundamentally and primarily a social instrument. Language is the device for communication; it is the tool through which one individual comes to share the ideas and feelings of others. When treated simply as a way of getting individual information, or as a means of showing off what one has learned, it loses its social motive and end (Dewey 27).

In classrooms, then, language was to be shared and a social activity, not treated in isolation as some schools chose to do.

FRIEDRICH FROEBEL (1782-1852)

Many of John Dewey’s ideas were rooted in another early educational philosopher, Friedrich Froebel. Froebel’s ideas from the 1800’s earned him the name "Father of the Kindergarten." Although his work heavily emphasized the
importance of preschool education, his basic educational philosophy is also foundational to the whole language philosophy. The two main components of Froebel's philosophy show through even one hundred years later in today's educational philosophy.

The first component was his view that a child needs to have "self-activity or spontaneity" (Downs 57). The child, with the help of the teacher, "adapts instruction received in its own way" (Downs 57). Like Dewey, Froebel believed that children need to use in a real situations what they learn at school. In essence, "it is more productive for the child to execute his own plan or carry out his own design than to learn passively" (Down 58).

The second component of Froebel's educational philosophy which lays the foundation for and is similar to the whole language philosophy is that he believed that all subjects, school activities, and all aspects of a child's life need to be interrelated. The day would be planned, then, with the "complete articulation and the harmonious correlation of studies" (Down 58). The child then could see how what is being learned relates to other things being learned.

Although he lived more than one hundred years ago, Froebel's educational ideas have become the roots of recent holistic educational philosophies. The two concepts of self-motivated learning and an integrated curriculum are essential to student learning. This is concurrent with some of the
general characteristics of the whole language philosophy. Thematic teaching and integration allow for links and similarities to be made between subjects, while student participation in designing curriculum is another characteristic.

JOHN LOCKE (1632-1704)

An earlier educational philosopher also had some beliefs that have become the stepping stones for today's whole language philosophy. Three main ideas of Locke's on education have contributed to the foundational beliefs of whole language.

In the area of curriculum, or what should be taught to students, Locke believed that what was learned in one subject area could and should be related to what would be learned in another area of study. (Yolton 73). This really is the essence of the whole language teaching strategy with themes to achieve curriculum integration. When appropriate, connections in math, language, science, art, and all of the subject areas are linked under one central theme.

Secondly, Locke believed that motivation for learning could also be enhanced by teaching "students to gain mastery over themselves, how to be able, upon choice, to study some subject matter" (Yolton 71). When children take the initiative to learn something, they tend to be more engaged and may discover something that is personally relevant to them. Locke further suggested by his writings that "what is
to be taught should not be presented as a task or burden or duty" (Yolton 70). The individual should see it as enjoyable and similar to play, so that it will be intrinsically motivating to study. In a whole language classroom the teacher and child together decide on topics of study. Whether it be spiders or orchestra instruments that are being studied, Locke would agree with this type of shared decision-making since students would be developing the life long skill of taking up a study on one's own free will.

A third idea of Lockes' which is also part of the whole language philosophy is his focus on language learning. During his time foreign languages were a major part of the curriculum. But unlike many educators of his time, Locke believed that formal grammar of learning languages should not be taught until the oral fluency and use of the language in everyday situations was cemented. Locke said "languages were made not by rules or art, but by accident, and the common use of people" (Yolton 78). The teaching of grammar rules is not avoided in a whole language classroom. A grammar rule is taught as it is needed rather than in an artificial hierarchial sequence out of the context of need. In a whole language classroom fluency, articulation, and practical uses of the language are addressed before emphasis on correct grammar and grammar rules.

LEO TOLSTOY (1828-1910)

Although Tolstoy's educational ideas and beliefs are not
as well known as someone like John Dewey's, Tolstoy was, "an intelligent and interested practitioner who relied on common sense and humane sensibility as guides to help him through the confusing and depressing eddies of formalistic educational theory and practice" (Tolstoy XVIII). Through Tolstoy's thoughts, people like John Dewey developed their philosophies. The strongest theme through out his educational writings is to respect students and create motivating curriculum with them in mind.

Like today's whole language believers, Tolstoy believed that schools do too little to foster individual development and learning. Rather, educational institutions tend to mass produce students by strictly imposing the same sequenced curriculum on every child regardless of individual needs or interests. In the following description Tolstoy described how this occurs,

The school is arranged in such a manner because the aim of the state school, established from above, is for the main part, not to educate the people, but to educate them according to our method...schools which are established from above and by force are not a shepherd for the flock, but a flock for the shepherd (Tolstoy 15).

Tolstoy makes the point that too often it is the children who have to adapt to the type of instruction being presented rather than the teacher adjusting instruction for each individual child's instructional needs and well being. Many schools do not focus on what intrinsically motivates each child. In a whole language classroom this view is translated
into the belief that time should be devoted to study areas that are suggested by the children. Time is given to develop and adapt the state and district outcomes into interesting areas of study that the children will be motivated to study.

Tolstoy tried to cultivate each individual's desires through providing them with different teaching styles and individualized learning experiences. Similarly, whole language teachers believe that they are in a learning partnership with their students.

HORACE MANN (1796-1859)

Horace Mann at one point was devoted to being a lawyer and serving the U.S. Government. He could not, however, shake his desire to serve society in an even more meaningful way. He became the secretary head for the newly created state department of education in Massachusetts during the 1800's. He believed in providing a public education system for society since people could not be functional without being literate.

Perhaps his biggest similarity with whole language advocates was his views on how to teach reading. He believed that children could be prepared for reading "by having interesting and inspiring stories read to them...a child’s earliest words are learned as wholes; hence the inappropriateness of beginning with the alphabet or syllables" (Mann 10). Mann wrote that the reason why he believes stories and "whole words" should be taught before individual sounds is because it is more important for a child to be able to
communicate and understand real language (Mann 40). Mann describes the need to relate words with concrete objects, "objects and events are known to us, before the names, or phrases, which describe them" (Mann 35). An example of what Mann meant is that when young children say the word "ball" they associate the word with the concrete object of a ball. It would be hard for young children to take each sound in the word ball and associate it with the concrete object of a ball. As mentioned earlier, whole language teachers teach words from "whole to part" rather than "part to whole."

Mann further suggested that reading aloud to children fosters interest in independent reading (Mann 39). Mann wrote,

Perhaps the best way of inspiring a young child with a desire of learning to read is, to read to him, with proper intervals, some interesting story, perfectly intelligible, yet as full of suggestion as of communication; for the pleasure of discovering is always greater than that of perceiving. Care should be taken, however, to leave off, before the ardor of curiosity cools (Mann 39).

Mann believed that children would become inspired to learn how to read independently because of the many interesting things that could be discovered from reading. Whole language advocates share and make available good literature and all genres and levels of difficulty of reading materials for children. Whole language teachers provide interesting activities with stories to further expand the child’s understanding of a story. The belief is that the child is motivated to learn to read from the modeling, sharing, and
activities provided from the print materials by teachers, parents, and other children.

RECENT WHOLE LANGUAGE ADVOCATES

INTRODUCTION

Modern day advocates of the whole language teaching philosophy have many similarities with many of the early historical philosophers cited in the previous section of the paper. It would be impossible to discuss the research and writings of all of the more recent advocates of whole language. For the purpose of this paper, three well known sources will be focused on. These three were chosen in particular for this paper because of their clear writing style and the prominence of their work. Many of their ideas and general beliefs help to outline and define the whole language philosophy. It is the continuous research and work done by modern whole language philosophers that will help bring even better teaching strategies and foundations to the whole language teaching philosophy.

KENNETH GOODMAN

Ken Goodman has done an extensive amount of writing and presenting of materials on the topic. Goodman has much in common with John Dewey's progressive ideas. Goodman wrote, "I share Dewey's view that the classroom is not preparation for life; it is life itself" (Goodman Didn't 192). Although Goodman has done much research in the area of reading, he has helped expand some of the underlying whole language beliefs.
In his book entitled *What's Whole in Whole Language?*, Goodman explains the philosophy simply and in a clear, concise manner. He answers the question posed in his title with the following points:

Whole language learning builds around whole learners learning whole language in whole situations. Whole language learning assumes respect for language, for the learner, and for the teacher. The focus is on meaning and not on language itself, in authentic speech and literacy events. Learners are encouraged to take risks and invited to use language, in all its varieties, for their own purposes. In a whole language classroom, all the varied functions of oral and written language are appropriate and encouraged (Goodman 40).

Goodman’s statements are based on language learning studies and beliefs. Using language in natural environments and for real purposes can be one way that language can be learned (Goodman *Whole* 7). His thoughts and writings are consistent with historical writers like Dewey.

Kenneth Goodman has also written about how whole language ideas and practices will spread and develop. For himself, he has refined his whole language practices and beliefs by what he has learned from students, actual teachers trying many various whole language strategies, and from other researchers (Goodman *Why* 386). He believes that the philosophical base is set from Dewey and many others, but that the philosophical base will solidify with "teachers in ghettos, barrios, and Indian reservations making it happen with kids" (Goodman *Why* 357). These teachers then share what they learn with other interested teachers on different levels. The whole language research base is becoming even greater with more and more
educators becoming knowledgeable and testers of various whole language practices.

ORIN AND DONNA COCHRANE, SHAREN SCELENA, AND ETHEL BUCHANAN

In Reading, Writing, and Caring, the authors offer a wealth of whole language strategies and activities. The book is written clearly for any beginning whole language teacher who could use the activities provided as well as to gain an understanding of the philosophical foundations. Although most whole language writings mention the social and emotional concerns of the student, this book makes very specific suggestions on how to create a warm, risk taking classroom environment which is essential to any whole language classroom.

One way is through teachers providing meaningful and appropriate aged level activities. The authors wrote, "if children are immersed in an environment that they are capable of making sense out of, they will learn through play in a natural, joyous manner. Only if the child is forced into dull and meaningless tasks will he be turned off to learning" (Cochrane et al. 133). As mentioned earlier, the whole language philosophy insists upon using authentic learning materials and hands-on activities. By providing these materials in a stimulating, warm environment students will more than likely want to participate. If children can successfully complete activities without constant frustration, a positive classroom climate should exist.
Another way the authors create a warm learning environment is to provide a genuine place that builds the child's self-esteem. The authors present the idea that each person, student, child is made up of "pieces" that they get from one another (Cochrane et al. 136). These pieces are smiles, nice comments, or encouraging words. They also write that "teachers can add many wonderful pieces to our lives or they can introduce negative pieces into our lives that we have not before experienced" (Cochrane et al. 136). Whole language teachers need to encourage progress with thoughtful activities, successes, and genuinely respect so each student can receive some "positive pieces." It does not mean that whole language teachers will overlook or ignore wrong behavior or not correct mistakes. It means that they will make corrections in optimistic, reassuring, helpful ways. Children might be more apt to try something and take risks in a classroom where they will be treated with respect and are gaining self-confidence.

These two ideas help to develop the social-emotional climate of a classroom. Much of the recent research focuses on the whole language activities and strategies to teach students, but the social-emotional environment of the classroom is just as important to prepare for and continue to address by the teacher. John Dewey wrote about the need for a positive child centered school, but it has been with recent writings that the belief has become a major component of the
whole language philosophy.

CONSTANCE WEAVER

Constance Weaver's book, Understanding Whole Language From Principles to Practice, is a necessary book for any newcomer or curious person of the whole language philosophy. In her book, Weaver defines and explains what whole language is and then offers the research foundations for language learning and language arts instruction. This particular book provides a clear framework to understand the philosophy. It may be particularly useful for the beginning teacher. That is why it has been chosen for this paper. Although her book is full of whole language beliefs and research, her development of the "transactional" model of learning as it relates to a whole language classroom helps to provide a research base for one of the major beliefs of the philosophy.

The transactional model of learning has also been called the "active concept of learning" theory (Weaver 8). The learner "actively engages with-or transacts with-the external environment, including people and books in order to learn" (Weaver 8). Children might touch, use, make, and manipulate various materials and ideas to enhance understanding of curricular content.

In many traditional schools, children become locked in a track of classes that they must take in a particular time frame. With the transactional model, in contrast, children might progress at their own individual rate.
Another implication of this model is that students must see the activities provided as personally relevant. So, teachers might offer student choices or plan with students the activities used. Weaver writes, "people rarely engage or invest themselves in learning tasks they consider boring...they do such tasks, but they don't engage themselves in the doing" (Weaver 10). So when using this "active" learning model, teachers must take into consideration students' interests.

Using this transactional model of learning helps to achieve and expands many of the whole language beliefs. One whole language belief is that the child participates in a meaningful way in what is being learned. When a child is actively immersed in an activity, the whole child is participating. Weaver also writes about how this model helps to achieve whole language beliefs,

A whole literacy perspective is broadly concerned with whole learning and the whole lives of children and teachers. It should not be surprising, then, that from one perspective, a whole language philosophy is in effect a particular manifestation of a much broader conception of learning. This broader educational philosophy stems from the recognition that meaningful and enduring learning occurs most readily as the result of an active process of meaning-making, rather than a passive process of filling in blanks or repeating or recopying information (Weaver 8).

As mentioned earlier in this paper the role of the active student is very important in a whole language classroom. Weaver's writing on the transactional model of learning as it relates to the whole language philosophy helps to enlarge and
solidify the whole language belief that students need to become partners and participants in their education.

APPLICATION OF THE WHOLE LANGUAGE TEACHING PHILOSOPHY

LITERATURE-BASED THEMATIC UNITS

DEFINITION

There are many different activities and approaches to teaching children that are compatible with the whole language philosophy of teaching. One such broad strategy is the thematic unit. When a teacher "identifies themes or topics that may be common to many or all subject areas" a thematic unit is created (Pappas et al. 49). Thematic units can be described further,

[They] reflect patterns of thinking, goals, and concepts common to bodies of knowledge. They link together content from many areas of the curriculum and depict the connections that exist across disciplines. Thematic units provide a framework for a community of learning in which all children can continue to learn language and to construct knowledge (Pappas et al. 49).

As the name of the strategy implies, a general topic is chosen and the activities are planned around that topic or tend to be broad in scope. Although there is a plethora of thematic choices that could be used, some examples of possible themes are: changes, explorations, the past, let's eat, and giants (Pappas et al. v). All of these themes have possibilities to integrate many different curriculum areas.

Thematic units are holistic in nature because they allow for students to be active learners. Many other beliefs of the philosophy can be accomplished using this strategy as well.
One of the major characteristics is the use of authentic texts and environment to learn. In a thematic unit reading and materials are real to the particular theme being studied. For example, if spiders are being studied, real spiders might be present in the classroom. The characteristic of using language for purposeful means takes place during thematic studies since students are usually working together, with the teacher, or alone doing hands-on activities rather than teacher-directed lessons. Language use, both written and oral, takes place to complete the activities or projects. Another characteristic, active student participation, typically automatically occurs with thematic teaching because students and teachers cooperate together to come up with the theme. The activities that are planned usually have "doing" activities which students take charge of independently or in groups. Evaluations during a thematic study are based on a wide variety of activities, modes, and during various time frames. Students are evaluated on their efforts, findings, and work throughout the unit rather than on just one exam. There is usually a culminating activity for evaluation as well. Thematic units are one broad whole language teaching strategy which use many of the core beliefs of the philosophy to organize the study.

Literature-based thematic units take the idea of thematic units one step further. A collection of thematically related literature is used to study a topic. A literature-based
thematic unit has as its core all types of genres of literature to provide information, language activities, and structure for the studies during the thematic unit.

A thematic unit might be implemented for as few as three days or for as many as twelve weeks. Hopefully, many or all of the subject areas could be integrated during the thematic study. Christine Pappas and other authors have created a book which is entirely on creating thematic units. The book suggests using various steps when developing a thematic unit. (See Appendix H for an example of possible route to planning a thematic unit) It describes the route a teacher might take in developing a thematic unit.

RATIONAL FOR ANNOTATED BIBLIOGRAPHY

In order to plan a literature-based thematic unit that has good, quality literature as the core of its activities and materials the teacher must spend time researching, reading, and planning. As a future teacher and an advocate of the whole language philosophy, I decided that it would be helpful to create a beginning bibliography of books which I can use to help me create future literature based thematic units. I read over three hundred children’s books of various genres and difficulty levels in the broad thematic areas of World War II, families, friends, and self esteem issues. I selected these themes because they provide a large base from which more narrow themes could be chosen. For example, in the area of families a more narrow thematic study could look at different
types of families around the world. Another reason why I chose these particular themes is because many struggles children have, come from the areas. I did narrow my focus with the unit on WWII to show that there is a wide variety of literature on a focused topic.

One reason for the creation of an annotated bibliography is to have at my disposal an emerging bank of quality children's literature titles and references. The criteria for developing such a bibliography has the following criteria: One, within a literature-based thematic unit children need to be introduced to many different genres of literature. This bibliography includes different genres. Two, the bibliography includes resources with different reading levels within one thematic area. As a whole language teacher, I need to respect the children's individual reading levels and provide appropriate materials for each child to have a successful experience. The third criteria is to include pieces of real literature. One whole language advocate wrote about using real literature in the classroom,

Teaching with real books is different from teaching with textbooks...textbooks, however, are chosen for the children by others. What will be read and how it should be responded to is worked out long before the child receives the books...Real books have no manuals to tell teachers all the things they must do and when to do them. The story contained in each book stands on its own. It is up to teachers and readers to work at interpreting what the author has written and, once the story is read, to decide what might be done in response. Teaching is shaped by teachers' beliefs about how children learn best, by their love and knowledge of literature, and by their awareness of children's interests. Life in literature-based classrooms is in a
constant state of becoming. Books, children and teachers all count. There is no prescribed plan to be acted out (Peterson 5)

Any teacher who plans to use real literature in place of a basal reader program must be very well read so that children are receiving experiences with quality literature and so teachers have at the ready, many literary selections to make appropriate, motivating reading recommendations to children.

It would be impossible to plan the activities for the four following emerging literature based thematic units of study since the exact students with whom the units would be used are not known at this point. More specifically, it would go against many of the whole language beliefs to plan units of study without the input from the students and without knowing the different learning styles of the individual students. Nevertheless, the annotated bibliography which follows the appendices of this paper is a rich source of quality literature from which to draw for the four themes identified.

CONCLUSIONS

CRITICISMS OF WHOLE LANGUAGE

Like any other educational philosophy and set of teaching strategies, whole language has its critics. Whole language principles and activities have been under fire in North America since their introduction during the past decade. Some of the major criticisms follow.

One major criticism of the whole language philosophy is that it is just another educational trend that is similar to
the "open classroom" of the 1960's. The criticism is focused on the physical freedom given to children in a whole language classroom when they work on various activities or other learning activities. In the 1960's, however, the trend of open classrooms was more focused on individuals working independently. In contrast the whole language philosophy emphasizes "learning as a social phenomenon" where children use language in many social contexts (Weaver 28). Although there are some similarities with the open classroom there are philosophical differences. One difference is that in a whole language classroom activities center around social learning and skills in contrast to the open classroom where the focus was on individual activities to achieve an objective.

Many educators viewed the open classroom as an educational trend and some now criticize and label whole language practices as just another educational trend. Some people argue that whole language activities and practices will become obsolete in the next ten years as another trend will take the spotlight. Many whole language advocates argue, however, that the whole language philosophy has a large, sound philosophical base and that the whole language "methodology is dynamic and continually evolving - guided by observations of students and the ever changing understanding of the theory" (Church 28). Whole language advocates also refute the criticism that whole language is just a trend; the approach has achieved success and longevity in other countries like New
Zealand and Australia.

A third criticism is that whole language teachers do not provide enough or any phonic instruction. One article which focused on this issue of teaching phonics asserted that, "For students of all ages, the upside of whole language is its incorporation of rich vocabulary, exciting narrative, and lovely literary conclusions. Many of today's children, rich and poor, are linguistically undernourished and desperately need the sounds of good language" (Vail 23). Critics argue that whole language teachers basically ignore phonic instruction and other related skills. This has become a major criticism of the whole language approach. In rebutting this criticism, whole language advocates respond that phonics and related skills are not neglected but, they are taught in a different style and structure than in a traditional classroom. Whole language teachers teach phonics in context of whole text and at the point of need. There have been many whole language strategies and activities written to address this criticism and to provide teachers with whole language based phonic lessons and methods for instruction.

Various debates will continue about the best ways, strategies, and philosophies to teach children. As long as research continues to be done, and as long as the demands and needs of students continue to change and are present in schools, new and old strategies will be tried and adjusted.

PERSONAL CONCLUSIONS
The intent of this paper was to define and analyze the basic characteristics and philosophical foundations of the whole language teaching philosophy as well as an exploration of a whole language teaching strategy. The various characteristics of the whole language philosophy allow for many effective teaching methods in a variety of subject areas. Students become participants in their education, while taking some responsibility for what they will learn and how they will learn it. The classroom environment is designed to provide each child with individualized activities and assessment while promoting cooperation activities and social learning skills. The materials and activities encountered and planned are things and ideas students will find and apply in their worlds outside of school. Links are made for students in various subject areas on a related topic so that students develop broader knowledge bases. These outcomes and end results of using whole language teaching strategies help to show how successful a whole language classroom can be. All of the aforementioned characteristics and beliefs discussed and analyzed through the paper also help to show how whole language teaching approaches can be effective ways to teach the language arts and other subject areas.

There are three personal concluding reactions that I would make as I close my research and writing on this topic. These reactions help to summarize my feelings and voice a fear for the whole language teaching philosophy. My first reaction
to the overall characteristics and beliefs of the philosophy is that I think the philosophy gives teachers more respect and credit for their knowledge of educational theories and practices. When teachers use whole language approaches they must be well read, creative, responsible, and accountable for their activities and assessments. Teachers must have a solid philosophical background in whole language in order to plan the activities and to explain to others the rational and philosophical base for the activities. In that sense, it is my belief that whole language teachers can finally use their intelligence and education to plan their classrooms.

Another personal conclusion on the whole language teaching philosophy I have is that students are becoming more valued in most whole language classrooms. It is with the student as the major concern, that activities and classroom environments are constructed. Students have a say in what they would like to learn. Students are therefore more intrinsically motivated to play active roles in their learning. I think that many schools have gotten off track in their planning and goals for students by not including students in any decision making or planning education. Each student should be and treated as the prized possession of a classroom. Whole language approaches try to accomplish this belief.

Finally, I will end this paper by voicing my fear for the whole language philosophy. As I have been reading,
researching, and discussing with others for this paper, I have found that many people ignore or skip over the philosophical base and core beliefs of whole language. Some teachers and writers explain that they are dedicated to the philosophy, but have no idea why or where the underlying approaches come from for whole language activities. They use a few whole language activities, but do not know why they are effective ways to teach. Others consider themselves whole language teachers because they simply use authentic literature and reading materials in the classroom. The philosophy, however, goes beyond using specific strategies and quality children’s literature, even though it is a good start. But the philosophical foundations, teacher training and ongoing preparation, and creation of student-centered activities must be developed along with using good children’s literature. My hope for educators is that when they use whole language strategies they will also learn the philosophical bases and methodologies from which the strategies are derived. Then, they have to defend what they are doing they will have the ammunition to do so.

In the children’s book *Amazing Grace*, which was mentioned in the beginning teaching scenario, the young character Grace is inspired by the stories she reads and those her grandmother tells her (Hoffman). She becomes the main characters, having wild adventures in her imagination, after listening or reading to these stories. One of her greatest characters that she
would like to become is an actress. In the end, she becomes Peter Pan in her classroom play after struggling to show her classmates that a female and an Afro-American can become a great Peter Pan, even though the character is male and white. After the play was finished Grace said, "I feel as if I could fly all the way home!" (Hoffman) One of the most important whole language beliefs and a future goal for my classroom is that all children will feel like Grace at many times during their educational careers and be able to celebrate and enjoy learning.
APPENDICES A-H
APPENDIX A

Examples of authentic text. First example is from the children's book, Amazing Grace, by Hoffman, 1991. This first page shows some of the feelings of the main character. Second example is a page from a children's encyclopedia. Taken from Childcraft - The How and Why Library, 1991. This second example shows an authentic nonfiction resource that children could use. The third page is from a basic encyclopedia. Taken from The World Book Encyclopedia, 1992. With the help of an adult, the child could use this as another nonfiction source.
The play was a big success and Grace was an amazing Peter Pan.

After it was all over, she said, "I feel as if I could fly all the way home!"

"You probably could," said Ma.

"Yes," said Nana. "If Grace put her mind to it, she can do anything she want."
Curtain going up!

A sudden hush falls over the theater. As the lights dim, the curtain goes up. And there, on the brightly lighted stage, a story comes alive.

Most plays are stories in which the actors speak their parts. Operas are stories in which the performers sing their parts. And in ballet, the stories are acted out by dancing to special music.

All over the world, people enjoy going to the theater to see acted-out stories of real or make-believe happenings. These acted-out stories are called plays. In a play about real happenings, events that could happen in real life are acted out, and all the events in the story are believable.

In a play about make-believe happenings, the actors can make the characters in the play do amazing things. In the play Peter Pan, the characters, Peter Pan and the children, fly through the air. Everyone knows that people can’t really fly. The actors wear harnesses and glide through the air attached to wires. That makes their flying look real to the people in the audience.

Canada

Actors give a performance of Twelfth Night, a play by William Shakespeare, at the Stratford Festival in Ontario.
tion and presents the final product as it will be seen by an audience.

The director's assistants include a stage manager and, depending on the budget, one or more assistant stage managers, an assistant director, and a rehearsal secretary. Often, one person serves as both assistant director and rehearsal secretary.

The rehearsal secretary sits near the director during rehearsals and takes notes. An assistant director may rehearse certain scenes, coach performers, or act as a go-between for the director and designers. In the professional theater, the stage manager organizes tryouts. He or she attends all rehearsals and records changes in dialogue and blocking on a master copy of the script.

Later, during performances, the stage manager is in charge backstage. The stage manager is often called upon to direct or rehearse replacement cast members or even a complete cast for a second production of a successful show.

The performers

Performers are among the few artists who cannot separate their means of expression from themselves. They are their own instrument. They create with their own body and voice and their own psychological and mental qualities. It is often difficult to separate talent and creativity from the performer's personality. But acting is an art and, as with any art, natural ability, study, and practice are essential.

Body and voice. Performers need a flexible, disciplined, and expressive body. They must be able to use their body to represent a wide range of attitudes and reactions. They may be aided by courses in stage movement, dancing, or fencing, or by participating in sports that demand physical control and coordination. Dancing and fencing are particularly useful because they provide grace and body control. These skills also assure more job opportunities for performers. A performer who can dance as well as act is especially in demand.

The same requirements of flexibility, control, and expressiveness apply to the voice as to the body. Performers learn how to breathe properly, to achieve variety in vocal rhythm and tone, and to make themselves heard and understood. They also learn dialects. Training in oral reading, relaxation, and singing is important. However, most performers require years of practice to change their voices significantly so they can speak higher, lower, louder, or softer—and still be understood. For professional performers, therefore, work on vocal improvement, as well as on physical flexibility, should continue throughout their career.

Observation and imagination. To portray a role well, performers should know about human emotions, attitudes, and motivations (reasons for behavior). They must be able to express these elements so they can be understood by an audience. A good performer develops the habit of observing others and remembering how they behave. If an actor takes the role of an old man, for example, he may prepare in part by observing how old men walk, stand, and sit. He may then adapt these movements to suit the character. A performer also learns how different people react to such emotions as happiness, grief, and fear.

Performers may try to develop emotional memory, so that in portraying a role they can recall a situation from their past that caused a similar emotional response in them. This is a complex acting technique, however, and should be used only after developing a thorough understanding of how one should best approach this process. Performers learn to know others through knowing themselves and their emotional capacities as thoroughly as possible. They portray others partly by using their knowledge of themselves and by developing a sensitivity to their own emotions.

Concentration is particularly important for performers. They must be able to involve themselves in an imagined situation and shut out all distractions. Their goal is to give a performance that creates the illusion of something happening for the first time. Part of making this happen involves concentrating on listening to other performers in the play and responding appropriately. It also involves focusing on each moment as it happens rather than anticipating what is to come.

Systems of acting. No matter how talented or even well-trained performers are, they cannot use their skills to full effectiveness without some consistent working method. Performers should try as many approaches to acting as possible, and choose the one, or a combination of several, they consider to be most successful for them.
APPENDIX B

Example of a page taken from a teacher's manual with prepared questions. Taken from City Spaces, Scott, Foresman Reading: An American Tradition, 1987.
Check comprehension, pages 60-61.

- How do the Birds feel about Tiger? They are afraid of him. (character, inferential)
- What kind of animal is Tiger? Proud, mean, big, and strong (character, analytic/evaluative)
- Do you think Ant is afraid of Tiger? Why or why not? No, because he walks across Tiger's nose (drawing conclusions, inferential)
- What do you predict could happen after Tiger catches Ant? Tiger might kill him. (predicting outcomes, inferential)
APPENDIX C

# Words You Know

- Read each sentence. **Underline the word that makes sense in the sentence.**

APPENDIX D

Example of the same story retold in a traditional basal reader and then the same story from a published storybook. The first version is taken from the basal reading series My Best Bear Hug, published by D.C. Heath and Company, 1989. The second version is from Animal Fables From Aesop, by Barbara McClintock. Published by David R. Godine, Publisher, 1991.
A Town Mouse went to see an old friend in the country.

"Have a little something to eat," said the Country Mouse. "I don't have much, but you are welcome to what I have."

"Thank you," said the Town Mouse. "You are very kind."
"It is nice here in the country," said the Town Mouse, "but you must come to town with me. There are many things to see there."

"Well, I am happy here," said the Country Mouse, "but I'd like to see your home in town."

"Let's go!" said the Town Mouse.
So they walked all the way to town. The Town Mouse and the Country Mouse went inside a big house.

"Come here," said the Town Mouse.

They came to a table filled with good things to eat.

The Country Mouse said, "This is great! I can see why you like it here."

"Yes," said the Town Mouse. "This is the best way to live!"
Just then something huge ran into the room. It jumped up on the table.

"Come on!" said the Town Mouse. "Let's get out of here! Run! Run for your life!"

The Town Mouse and the Country Mouse ran as fast as their little feet could go.
"What was that huge thing?" asked the Country Mouse.

"That was a cat," said the Town Mouse. "Cats like to eat mice."

"They do?" said the Country Mouse. "I think it is time for me to go home. This town life is not for me."

"Well, I guess it is not for everyone," said the Town Mouse.
So the Country Mouse went back
to the country where she could eat
what little she had in peace. And she
never went into town again.
The Town Mouse and the Country Mouse

One day a Town Mouse went to visit his cousin in the country. This cousin was a rustic sort, but he heartily welcomed his town kinsman. Beans and bacon, cheese and bread, were all he had to offer, but he offered them freely. The Town Mouse turned up his nose at such plain fare and invited his country cousin to visit his town home.
“Come with me and I’ll show you how to live. You won’t have been in town a week before you’ll wonder how you ever could have lived in the country.”

No sooner said than done: the two mice set off.
They arrived at the Town Mouse's residence late at night.

"You'll want some refreshment after our long journey," said the Town Mouse, and he took his cousin into the grand dining room.
There they found the remains of a fine feast, and soon the
two hungry mice were eating up jellies and cakes and all
kinds of rare delicacies.
Suddenly they heard growling and barking. "What is that?" cried the Country Mouse in alarm. "Oh, that's only the dog of the house," answered the other. "Only!" squeaked the Country Mouse. Just at that moment the door flew open and in came a huge sniffing mastiff. The two mice had to scamper off quickly and hide.
“Good-bye, cousin,” said the Country Mouse, as soon as the danger had passed.

“What! Going so soon?” asked the Town Mouse in surprise.

“Yes,” the Country Mouse answered. “Better beans and bacon in peace than cakes and ale in fear.”
APPENDIX E

Example of a classroom time schedule in an integrated classroom. The first page is a brief description and the second example is a more detailed schedule. Taken from An Integrated Language Perspective In the Elementary School, by Christine C. Pappas et al., 1990.

### Detailed Schedule, Second Grade Classroom

<table>
<thead>
<tr>
<th>Time</th>
<th>Children</th>
<th>Teacher</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DAY 1 (LET'S EAT!)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>TEACHER PREPARATION</strong></td>
<td>7:25</td>
<td>Carol checks setups for class, writes announcements on board, and checks mail in office.</td>
</tr>
<tr>
<td><strong>OPENING EXERCISES</strong></td>
<td>8:55</td>
<td>Carol greets children as they enter, makes sure forms are filled in, and makes announcements.</td>
</tr>
<tr>
<td><strong>SHARING TIME</strong></td>
<td>8:05</td>
<td>Carol invites children to sharing area. She shares a limerick as an introduction to Sharing Time, and then monitors time and participates in the group discussion.</td>
</tr>
<tr>
<td><strong>UNIT INTRODUCTION</strong></td>
<td>8:25</td>
<td>Carol introduces a new story, The Hungry Thing. Leads discussion of hunger, “What might happen if no one could figure out what you wanted?”</td>
</tr>
<tr>
<td><strong>INTEGRATED WORK TIME</strong></td>
<td></td>
<td>Carol uses the Big Book* and reads it along with the children. She points out features of the text and of individual words and phrases. As children suggest additional things to feed the Hungry Thing, Carol adds lines to the Big Book* text.</td>
</tr>
<tr>
<td><strong>INTEGRATED WORK TIME</strong></td>
<td>9:00</td>
<td>Carol introduces the new unit on eating, solicits children’s suggestions, and goes over some possible activities.</td>
</tr>
<tr>
<td>Children move to work areas throughout the room:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Grocery list. Children locate advertisements for luncheon foods and figure math problems related to serving a luncheon. A grocery store in the area provides practice in careful shopping, making change, adding money, and checking work with a calculator. Finished work is put in a folder for the teacher to review.</td>
<td></td>
<td>Carol moves between groups, helping children get started on their work.</td>
</tr>
<tr>
<td>Food measures. This group works with an assortment of measuring devices and dry foods to measure. They work to establish equivalencies and make a chart to use in cooking activities.</td>
<td></td>
<td>Carol works with a small group who have been having difficulty with previous math activities. The children then work in pairs to check their work.</td>
</tr>
</tbody>
</table>
—Growing food. Assorted seeds and reference books help children with sorting and matching seeds to full-grown plants. Children set up experiments to observe root growth and chart development of different types of food plants. Carol leaves the math group and joins the children who are planting seeds. She shares part of Hoe, Hoe, Hoe, Watch My Garden Grow and discusses types of plants children have decided to grow. She asks children for a report on their progress during today's evaluation time.

—Food in fiction. Children select books from the reading center to read to each other. Each child picks a book to read during individual conferences. A parent volunteer (prepared by Carol) is working in this area today. She has a pot of Japanese noodles bubbling in a corner, and How My Parents Learned to Eat in hand. She shares the story and invites children to eat the noodles with chopsticks. In between helping children manage the chopsticks, she records the descriptive words and phrases the children use to describe this experience. These will be added to children's Learning Log® and used in their writing.

—Eating around the world. Children listen to the story, and try to use chopsticks. They discuss the experience and try to find interesting words to describe it. They locate Japan and the United States on their inflatable globes and on the Peter's Projection world map. In pairs, they create directions for eating in America and in Japan.

RECESS AND SPECIAL CLASSES
POETRY
10:50

Children recite their favorite poems after the teacher shares some poetry. A child suggests illustrating Shel Silverstein's "Adelaide" and several other children decide to put together a book of eating poems and illustrations.

INTEGRATED WORK TIME
11:00

Children rotate groups or move to writing tables to complete projects begun earlier in the day.

LUNCH FOLLOWED BY A THIRD INTEGRATED WORK TIME
SUSTAINED SILENT READING*
12:30–12:55

Children read selections of their choice. Carol shares several "eating" poems from The Random House Book of Poetry. Carol points out other books of poetry in the reading center and suggests asking the librarian for help, too.

Carol works with a child who is ready for an "editor" for part of "How to Eat in Japan and the United States.” She also checks with the poetry group to see that they have themselves organized for work.

Carol has conferences with individual children or with small groups to hear them read and to discuss their reading.

(Continued on next page.)
**DAY 1 (LET'S EAT)**

<table>
<thead>
<tr>
<th>Time</th>
<th>Children</th>
<th>Teacher</th>
</tr>
</thead>
<tbody>
<tr>
<td>LITERATURE</td>
<td>After discussing food preferences, children decide to survey a grocery store to find out what foods are best sellers. They select a committee to work with the teacher in developing a survey.</td>
<td>Carol shares <em>Gregory the Terrible Eater</em> and leads discussion of favorite and least favorite foods</td>
</tr>
<tr>
<td>12:55</td>
<td>Children retrieve <em>How My Parents Learned to Eat</em> to find parts that refer to American eating customs. They reread some parts.</td>
<td>CAROL ASKS CHILDREN TO SHARE WHAT WAS LEARNED ABOUT JAPANESE FOOD AND CUSTOMS. WHAT PART OF THE STORY HELPED THEM UNDERSTAND HOW COMPLICATED AMERICAN-STYLE EATING WAS? SHE INVITES SEVERAL CHILDREN TO SHARE PARTS OF THE STORY BY READING THEM ALOUD.</td>
</tr>
<tr>
<td>INTEGRATED</td>
<td>Complete work for today's projects and plan for next day.</td>
<td>CAROL WORKS WITH THE SURVEY COMMITTEE TO GET THEM STARTED AND THEN MOVES BETWEEN GROUPS TO HELP CHILDREN DECIDE ON FUTURE DIRECTIONS, OR BRING CLOSURE TO A PROJECT.</td>
</tr>
<tr>
<td>WORK TIME</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1:30</td>
<td></td>
<td></td>
</tr>
<tr>
<td>EVALUATION AND CLEAN-UP</td>
<td>Children put work in notebooks and begin end-of-day jobs.</td>
<td>CAROL ASKS CHILDREN TO SURVEY FOOD PRODUCTS AT HOME AND TO SEE IF THEY CAN FIND TWO FOODS THAT DID NOT COME FROM THE UNITED STATES.</td>
</tr>
<tr>
<td>2:15</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**DAY 2 (LET'S EAT)**

<table>
<thead>
<tr>
<th>Time</th>
<th>Children</th>
<th>Teacher</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHARING</td>
<td>One group shares their Big Book* of eating customs in the United States and Japan. Children discuss punctuation in the Big Book* as the group explains that they had some difficulty in this area. Several children read sentences as if other punctuation had been used (i.e., question marks rather than an exclamation mark or a period). They begin to construct some helpful hints for punctuation. Several children come to the board to put punctuation marks in sentences and to see if their hints are really helpful.</td>
<td>CAROL POINTS OUT INTERESTING WORDS AND IDEAS, COMMENTS ON THEIR CAREFUL ATTENTION TO PUNCTUATION AND ASKS THE CLASS WHY THEY THINK CERTAIN CHOICES WERE MADE.</td>
</tr>
<tr>
<td>TIME 8:05</td>
<td></td>
<td>CAROL WRITES SOME SENTENCES ON THE BOARD AND ASKS CHILDREN TO USE THEIR NEW HELPFUL HINTS TO PUNCTUATE THEM. &quot;LET'S SEE IF WE CAN USE THESE HINTS TO MAKE OUR WRITING MORE INTERESTING. WHY DON'T YOU BRING SOME EXAMPLES OF GOOD USE OF PUNCTUATION TO 'GROUP' TODAY?&quot;</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Children match passports from a previous activity to country names posted in the room and sit in those areas.

Children quickly note that the snack is not "fairly" distributed.

Discuss as a class how to solve the problem. Rank order solutions. Pick one, and act on it.

Discuss ways to help hungry people. Select several possibilities to work on.

Work in groups to plan for hunger projects (see WEB).

Share plans and make a schedule for accomplishing them.

Once children are seated by country, Carol distributes snack based on food distribution in the countries represented.

Carol asks them to outline the problem and then offer possible solutions.

"How do we decide which solution to pick?" Compare to problems in the world. "Can we think of possible solutions to some of these problems?"

Divide class into groups based on the suggestions and student interests.

Carol helps make plans workable and serves as recorder.

<table>
<thead>
<tr>
<th>DAY 15 (LET'S EAT!)</th>
<th>Time</th>
<th>Children</th>
<th>Teacher</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHARING TIME</td>
<td>8:05</td>
<td>A committee that went to the food pantry reports on the need for cardboard boxes. The class decides to collect boxes and deliver them the following week.</td>
<td>Carol participates in the discussion that is led by the committee of students.</td>
</tr>
<tr>
<td>DRESS REHEARSAL</td>
<td>8:25</td>
<td>Run through the play, poems, and other readings planned for guests.</td>
<td>Organize a runthrough of the program, including play adapted from The Funny Little Woman.</td>
</tr>
<tr>
<td>ROOM ARRANGEMENT</td>
<td>9:00</td>
<td>Put final touches on decorations, and organize food.</td>
<td>Work with children on room decoration.</td>

APPENDIX F

Example of a thematic web. The theme is Exploration. This is an example of how a teacher could organize and brainstorm when planning for a thematic unit or integrated schedule. Taken from An Integrated Language Perspective In the Elementary School, by Christine Pappas et al., 1990.
APPENDIX G

Example of model integrated outcomes for language arts which were developed by the state of Minnesota. Second page is a chart showing how the various language arts outcomes could be integrated. Third page is a diagram of how outcomes fit into district goals and student choices. Taken from Model Learner Outcomes for Language Arts Education, Minnesota Department of Education, 1988.
MODEL INTEGRATED OUTCOMES
FOR LANGUAGE ARTS

<table>
<thead>
<tr>
<th>SBE LEARNER GOALS</th>
<th>LANGUAGE ARTS, READING LEARNER OUTCOMES</th>
<th>DEVELOPMENT AND CONCEPT EMPHASIS</th>
<th>TEST ITEM BANK</th>
</tr>
</thead>
</table>

I. PURPOSE

Purpose relates to why the communication is taking place. What is to be accomplished? For example, one may read, write, speak or listen to entertain or be entertained. Purpose helps establish criteria for the organization, style, content, and length of the communication act.

A, B.1, A.2, B.8, C.5.

WRITING

1. Use language to identify audience and purpose clearly before composing.
2. Develop a style appropriate to purpose and audience.
3. Share writing to determine if specific criteria have been met.
4. Use writing for various purposes.

READING

1. Set purposes for reading various materials.
2. Use various reading strategies and rates according to the type, purpose, and difficulty of the materials being read.

Knowing, Applying

Applying, Integrating

Applying, Integrating
SPEAKING

1. Demonstrate the five functions of oral communication (ritualizing, controlling, feeling, informing, and imagining) using appropriate clarification of purpose.

2. State goals for a group (small group communication).

3. Speak to a variety of purposes (public communication): show and tell, oral report, demonstration, information, speech, personal experience, storytelling, oral interpretation, etc.

LISTENING

1. Apply listening skills in a variety of contexts for several purposes.

2. Adjust listening behavior to communication purpose.

II. AUDIENCE

The concept of audience addresses for whom the communication is intended and causes the communication act to be shaped accordingly. Is it for children? Is it for adults? Is the audience likely to be informed or uninformed, interested or uninterested in the topic?

The student will know the needs of varied audiences and demonstrate the use of communication appropriate to those needs (age, interest, background knowledge, formal/informal setting, group size).
APPENDIX H

Example of a possible planning route for creating a thematic unit and activities. Taken from An Integrated Language Perspective In the Elementary School, by Christine Pappas et al., 1990.
ANNOTATED BIBLIOGRAPHY
ANNOTATED BIBLIOGRAPHY FOR THE FOLLOWING LITERATURE-BASED THEMATIC UNITS:

1. World War II
2. Families
3. Friends
4. Self-Esteem
5. Miscellaneous Books
Literature Unit: World War II

Type: picture book, intermediate (5th/6th)

Summary: Rose Blanche is a girl who lives in Germany during WWII. She sees, watches, and is fearful of the army trucks that she sees. She follows the trucks one day and sees where they hold Jewish people. She continues to visit the camp bringing food for the prisoners. She dies from a shot when she goes back one day to find the camp destroyed.

Other Information: Related topics of study could include character development, resistance. Rose Blanche (White Rose) was a group of young German citizens protesting the war.

Type: picture book, real photographs, all ages - but appropriate for intermediate, black and white, simple text.

Summary: Using real photos, a brief description is given of Jewish life before the holocaust and life as it changed for the Jewish people. The book shows what happened to many Jewish children.

Other Information: Related topics of study could include Jewish children. Book would be good way to introduce any unit on WWII.

Type: picture book with extensive text, disturbing/abstract pictures, intermediate 5th/6th.

Summary: A family in Hiroshima is interrupted during breakfast by the atomic bomb August 6, 1945. The flight and after effects of the radiation are shown through the family.

Other Information: The story is a narrative based on a true story. The title means "The Flash of Hiroshima." Related topics of study include the bomb itself and radiation
sickness.

**Type:** picture book with extensive text, beautiful oil illustrations.

**Summary:** A mom retells the story of how she got a little glass angel with a golden wing for the Christmas tree. She tells a story about how her father was taken away during the war, while her and her family were moved around and had to endure many hardships. After the war, the father returns with the little angel. She was a refugee and the glass angel symbolized their new life after the war.

**Other Information:** Related topics could be separation of family issues, refugee life, and Christmas tales.

**Type:** chapter book, 190 pages, 5th grade and above.

**Summary:** Anna and her family become refugees after the Nazis take over in Germany since they were Jewish. Their moves to Switzerland, Paris, and France are filled with hardships, new schools, and new languages. In the end they had survived.

**Other Information:** Related topics would be geography, Paris landmarks, and survival.

**Type:** Biography, chapter book, real black and white photos, 216 pages, easy to read but sophisticated ideas and writing style, intermediate.

**Summary:** Through interviews with various people (sister, friends, etc), the author illustrates the life of Sophie Scholl. She was twenty-one years old when she was put to death for her work distributing anti-Nazi leaflets throughout European colleges. Her brother and some friends had formed what was called the White Rose Resistance group.

**Other Information:** Related topics could be growing up in Nazis Germany, resistance, and women studies.

7. **Book Information:** Hautzig, Esther. *The Endless Steppe:

**Type:** chapter book, 250 pages, narrative, easy to read with proper background development, 5th/6th grade.

**Summary:** Esther Rudomin (12 year old) lived happily in Poland as a Jew before the war. Once the war began she and her family were under arrest by the Russian government because they were "capitalists." The story shows their deportation to Siberia, the long struggles, life at the camp, poverty, and separation from other family members. The book ends with the family gaining their freedom with the end of the war, but without any of their possessions.

**Type:** chapter book, 179 pages, writing style is somewhat confusing to understand but very worthwhile book.

**Summary:** Annie de Leeuw was a Jewish girl from Holland who tells the story. Annie and her sister must hide in an upstairs room of a farm house during the war. They are separated from their father and other sister. The story shows how close the farm family and girls become and the struggles they endure being hidden for two years.

**Other Information:** Other related topics of would be separation, loneliness, and survival.

**Type:** chapter book, 170 pages, easy reading, fantasy like.

**Summary:** Hannah did not want to go to the annual family Passover meal. Her relatives just reminisced about their Holocaust experience. After Hannah preforms the tradition of opening the door to let in the prophet Elijah, Hannah returns to the 1940’s and experiences first hand the concentration camp experience. The end of the book returns Hannah to the present time with a changed attitude about her relatives.

**Other Information:** Easter/Passover holidays.

**Type:** chapter book, 137 pages, easy reading, 4th/5th.

**Summary:** Two ten-year-old girls from Copenhagen help each
other out through the war. One of the girls is Jewish. The two families are very good friends and help the Jewish family relocate to Sweden. The story often times returns to the theme of survival and the theme that if one does not know the full truth of what they are doing they will not be as fearful. The escape to Sweden on fishing boats provides a suspenseful tale of escape.

Other Information: family, Jewish holidays, death of a sister, resistance groups.

Type: Picture book with extensive text, black and white pencil drawings.

Summary: Jeannie-O’s dad had to go away to the war. He was no longer safe in America. Jeannie-O and her mother were very sad and their life changed. Those changes, the waiting of letters, and the victory of WWII are all shown.

Other Information: Shows an American child’s view of the war with some geographical information.

Type: chapter book, but more easy to read, complex ideas, 4-6.

Summary: Sadako, a twelve year old, discovers she has leukemia as a result from the radiation from the bomb. In order to get better she believes that if she make one thousand paper cranes she will regain her health, but she does not.

Other Information: Could be used for a unit on families and survival, Sadako is honored today at her memorial in the Hiroshima Peace Park.

Type: chapter book, 156 pages, adventure, 4-6.

Summary: Peter Lundstrom and his friends all help save Norway’s money during the war when they sled down hills with gold hidden under them, past the Nazi guards. In the end the gold is saved.
Other Information: Quick paced story, all grades would enjoy, not known if it is a true story.

Type: picture book with extensive meaning, all ages.

Summary: Miriam and the other women in a concentration camp stay up late at night and use whatever they can find to make toys for the young kids in the concentration camps on the day they are set free. The hardships are shown through the illustrations.

Type: picture book with sophisticated text meaning, all ages.

Summary: A little Jewish girl must live with a farm family during the war away from her parents so she will remain safe. A bunny becomes her pet and she has a safe place to hide.

Other Information: Beautiful illustrations.

Type: chapter book, 47 pages, all ages would enjoy.

Summary: Katie and her mom live in New York City during WWII when her father must go to the war. They are a Jewish family and their traditions are shown, as well as the pains of losing someone to the war. They are supported by one of the mother’s friends and their new child.

Other Information: Could be used for a unit on death and surviving.

Type: picture book with extensive text, unique pictures, all ages.

Summary: A grandmother tells a story to her grandchild about escaping two wars from Russia. Gypsies once told her that she would run into misfortune which she did when the wars came. Many of her relatives died and she had barely enough to live, but the birth of her child was a miracle since people loved to
see a baby and offered her and her family many things. She finally made it to America with her daughter.

**Type:** chapter book, nonfiction biography, 4-6.

**Summary:** The background information to Anne Frank’s hiding, family, and death are given in the easy to read, but informative book. Good for background information on Anne Frank who was a Jewish girl who hid with her family during WWII in Holland, but was found by the Nazis. The writing of her diary and how it came to be published are discussed.

**Other Information:** Would be excellent to read before reading the diary itself.

**Type:** chapter book, 111 pages, 4-6.

**Summary:** Lisa is a Jewish girl who lives in Denmark during WWII. When Hilter crashes the Danish government Lisa and her family worry for their future. Her brother and her take part in an underground resistance program. In the end the Danish government and people help hide away many Jews to Sweeden, including Lisa and her family.

**Other Information:** Adventure type story, suspenseful.

**Type:** chapter book, 149 pages, 5-6.

**Summary:** A little boy is friends with a Jewish boy named Friedrich and his family. Each chapter shows how the Jewish people where shunned and destroyed through the years leading up to WWII and during the war. Many of the Jewish traditions are shown as well as the emotions the Jewish family encountered. The eventual death of the Friedrich is shown because he was not allowed in a bomb shelter.

**Other Information:** Chronology in the end of the book, book has some underlying ideas and themes that are not explained unless one already knows about WWII.

Type: chapter book, extensive reading, 229 pages, biography.

Summary: Book shows the travels, struggles of finding live family, and surviving as a Jew after WWII. The life experiences in concentration camps are shown of one woman. The significance of family and finding live family for Jews is emphasized.

Type: chapter book, 171 pages, can become confusing.

Summary: A thirteen year old girl makes her way on one of the many transports that lead people back to their home towns or new places after WWII. She goes alone and is moving from Russian zone to Cologne. Many adventures and discomforts are had, but her main goal of the trip is to help the elderly couple she meets make it to the boarder.

Other Information: Shows refugees hardships after the war as well as during.

Literature Unit: Families

Type: picture book, easy reading 1-2nd grade.

Summary: Danny, a young toddler, is sad because he never gets a chance to hold his new baby sister. All of his relatives and parents get the opportunity to hold the new baby. Finally, the parents and relatives surround Danny and give him the chance to hold the baby.

Other Information: nice illustrations.

Type: picture book, easy reading 1-2nd grad.

Summary: After digging a big hole in their sandpit, Wild and Woolly fall to the North Pole. On their way back home they met, eat, and stay with unique individuals like a fairy and a gypsy. They finally make it to their own home, their parents, and known food.

Other Information: Related topics of study could include voyages and fantasy lands.

Type: picture book, only a few sentences of text, K-1.

Summary: Jessie has to wait for her mother to come pick her up from dance class. Because Jessie’s mother ends up having car problems and other delays, she is late. Jessie begins to think that her mother has forgotten about her, but is happily surprised when her mother finally shows up.

Other Information: Related topics could include working mothers and patience.

Type: picture book, 1-2nd.

Summary: Katie Morag gets to deliver the mail on the Isle of Struay one day when no Mr. McColl could not deliver it because his child was getting in a new tooth. Katie had to deliver a package to her Grandma, but ended up getting all the other packages delivered to the wrong addresses. In the end all of the packages end up at the right houses, thanks to Katie’s Grandmas help.

Other Information: A related topic of study could be postoffice. Nice illustrations.

Type: picture book, 1-3rd grade.

Summary: Aunt Martha and her niece take a road trip every summer —without men. The story describes what they will do, like stop and buy junk or eat in fancy restaurants without the harassment of other traveling companions telling them to hurry up or to quick wasting time.

Other Information: the characters are Afro-American, but the story itself lacks an interesting storyline.

Type: picture book, predictable pattern 2-3rd.

Summary: The book shows the progression of a family from the
wedding of a young farm couple, to their having kids, to becoming grandparents, and to their death. This is done with a simple song like verse throughout the story.

Other Information: beautiful pictures, shows the traditions of a farm family or a family living long ago.

Type: picture book, K-1.

Summary: Alfie and Annie Rose played a "This little pig" with Annie Rose's feet. When Alfie got a pair of new yellow boots to splash around in the mud and puddles with, he realizes that his boots are on the wrong feet. Annie Rose also decides to be like her big brother and get a pair of boots.

Other Information: More appropriate for a discussion or unit on right and left, but does show sister and brother relationship.

Type: picture book, easy reading 1-3rd, beautiful pictures.

Summary: A girl and her family are hiking when they stumble upon an area which was once occupied by a house. The girl finds a nail and other clues to what the family might have been through. The family who lived at the house is shown and revealed through the girl's findings.

Other Information: Related topics of study could include a study on family roots.

Type: picture book, easy reading, K-1.

Summary: The story briefly describes how two expecting parents prepare for the day when their adopted baby comes home.

Other Information: Too simplified, rather corny!

Type: picture book, easy to read, 2-3, pencil drawings.
Summary: A little boy is left with his grandfather to wait for his Mom and Dad to come home with the new family arrival. The little boy is sad because he did not even know who the baby was. The grandfather tells the boy a story about how much sweeter life is when there is a new baby to celebrate. The boy feels better in the end.

Type: picture book, 1-3.

Summary: Before Jemima leaves to go back home after spending the summer with her aunt on a farm, she takes one last walk around remembering all of the things she did with her aunt that summer.

Other Information: Aunt-niece relationship, poetry like.

Type: picture book, easy reading, K-1.

Summary: A mother retells the story to her daughter about a time when the daughter was very young and cried the whole night until the parents realized all she wanted to do was to be held.

Other Information: Related topics for study could include childcare and love.

Summary: Kayla is the big sister who the speaker of the book, the younger sister, follows around and imitates. At the end of the story the younger sister decides to take the initiative and Kyla follows the younger sister.

Type: picture book, easy to read, 1-3.

Summary: Anna’s grandmother comes every Wednesday to take care of her while her Mom and Dad are at work late. Anna’s Dad’s birthday is also coming up. On Wednesday nights Anna is hard at work teaching her Grandma how to read and on the Dad’s
birthday, Grandma's birthday present to her son is her new skill of learning how to read.

**Other Information:** Related topics of study could include lifelong learning and birthdays.

**Type:** picture book with extensive text, 2-4.

**Summary:** A little girl tells the story of her great-aunt, the Lupine Lady. Her great-aunt was told by her grandfather that she should do three things in life and one of them was to make the world more beautiful. As the great-aunt was getting old she still had not done anything to make the world a more beautiful place, she then decided that by spreading Lupin seeds around her city she would complete that task in life.

**Other Information:** Related topics of study could include flowers, voyages, and lupines. Beautiful pictures.

**Type:** picture book, easy to read, K-3.

**Summary:** Mr. Jordan has spent many different times of his life in the park. At each phase in his life the park has provided him with a happy place to visit. When he finally becomes very old, he enjoys going to the park to watch the young kids.

**Other Information:** Could be used for study on growing old or different phases of life.

**Type:** picture book w/extensive text, 1-3.

**Summary:** A little girl retells the story of her Grandma's life. The grandma came from Russia and survived by aiding her husband's job with gambling. The granddaughter learns card games as well. The little girl then becomes very sad when she finds out that her grandmother died.

**Other Information:** Related topics include immigration and death.

Type: picture book, easy to read, K-2.

Summary: A little boy tells a story about how his father picks him up from daycare and then they make spaghetti together. The trip to the grocery store, the preparation, and mom’s arrival home are all included in the story.

Other Information: The story helps to show other family dynamics, like a working mother.

Type: picture book, 1-3.

Summary: Katie lives with her grandmother during the summer and her big, boy cousins come to visit her and her grandmother. There are many chores to take care of at the island, but Katie and her cousins are tempted to go into the city and play chickenelly. They end up going to play the game and Katie felt bad since she knew her grandmother felt sad that they skipped out on their chores. Everyone finishes their chores and they have a nice dinner, with Grannie who forgives them.

Other Information: good pictures, related topic of study could be temptation.

Type: picture book, all ages.

Summary: Rhyming story which is set up parallel to the five stages of grief. Each page shows how Everett feels when his father died. Denial, Anger, Bargaining, Depression, and Acceptance are all shown through Everett’s verse.

Other Information: Book would be excellent for death and dying unit, pictures are pencil or charcoal sketches.

Type: picture book, easy to read, K-2.

Summary: A little girl walks with her mom and new baby brother to a pond to ice skate. On the way there, the little girl asks if her mom use to do that with her when she was little or before she was born. The story shows the love of a
mother for a daughter and how it continues to grow throughout

time.

Other Information: Somewhat corny, but appropriate.

22. Book Information: Hall, Donald. The Man Who Lived

Alone. illustrated by Mary Azarian. Boston: David R.

Type: black and white prints, easy to read, 1-4.

Summary: An old man's life is recreated for the reader. He

had an unhappy childhood of moving after his father's house

burned down. He enjoyed living with his cousins and was sad

to move back with his father. He ran away and then began life

alone in a little cabin. He visited his cousins often and

their children. He did odd jobs and learned to be self

sufficient. In the end he knows he is very happy living

alone.

Other Information: Other topics of study could include

survival, living alone, and being different.

23. Book Information: de Paola, Tomie. Nana Upstairs and

Type: picture book, easy to read, but complex story, 2-4.

Summary: Tommy went to visit his grandmothers every Sunday.

He called his great grandmother Nana Upstairs because she was

in her bed all day, except for the times when her Tommy ate

together. He called his grandmother who was always in the

kitchen, Nana Downstairs. He loved to visit his grandmothers.

One day his mother told him that Nana Upstairs died. He did

not know what death was until that experience.

Other Information: Other related topics of study could

include death and grief, and family roots.

24. Book Information: Hughes, Shirley. The Big Alfie and

Annie Rose Storybook. New York: Lothrop, Lee and Shepard

Type: collection of stories and poems, easy to read, 1-3.

Summary: Alfie and her little sister Annie Rose share lots of

adventures and learn about life through various experiences

showed through in the book. Their relationship of brother and

sister is also showed.

Other Information: Stories within collection include Alfie

teaching Annie Rose how to eat properly and when grandmother
comes to share her pictures, nice illustrations, somewhat overgeneralized stories.

**Type:** picture book with extensive text, 1-4.

**Summary:** Bobby is named after his grandfather Bob, and both call each other by their first names. Bobby loves to hear his grandfather Bob tell him about how he taught him to walk. They use to play many special games together. One day Bobby’s parents tell him that his grandfather had a stroke. Bobby is sad that his grandfather does not remember his name, but slowly but surely Bobby helps his grandfather to learn how to eat again and finally walk. Now the grandfather can ask Bobby how Bobby taught him how to walk.

**Other Information:** Other topics include survival, strokes, and changes.

**Type:** picture book with extensive text, K-3.

**Summary:** Bo goes to visit his grandpa in the summer. They play baseball, learn about the names of flowers and bugs, and do other summer activities. Bo’s goal of the summer is to see a shooting star. It is not until the last night together that Bo sees a shooting star. His grandpa teaches him to make a wish on that star.

**Other Information:** Book has somewhat of a predictable style. They both give real names to all the things they see in nature as well as their real names. For example, a Douglas Fir they call Doug.

**Type:** picture book, easy to read, K-1.

**Summary:** A little boy wakes up early and tries to wake up his father with all kinds of questions. When the little boy threatens to play his recorder the parents get up and allow him to fall back asleep in their bed with them.

**Other Information:** Corny, but may be appropriate for a study of manners or morning.

28. **Book Information:** Gould, Deborah. *Grandpa’s Slide Show*. 

Type: picture book with extensive text, 2-4.

Summary: Sam and Douglas went to their grandpa’s and grandma’s house often for dinner. After dinner the grandpa always pulled out slides for a slide show. Then one day the grandpa dies and the little boys see the grandmother and their mother going through the steps of grief and funeral preparations. The story ends with the remaining family taking out slides and having special memories about their grandpa.

Other Information: Story and pictures are somewhat disturbing at the funeral scene, but would be excellent to show children the steps that are taken when someone dies.

Type: picture book, easy to read.

Summary: A little girl and her grandpa have special memories together. One example is that the grandpa always switches around words like the little girl says that they are eating chocolate ice cream, but the grandpa tells her they are really eating strawberry ice cream. In the end the grandpa cannot play because he is sick and finally dead.

Other Information: Fun pictures, could be used for predictable pattern book.

Summary: Will’s mom is busy doing other things and continuously asks Will to entertain and hush his baby brother. Will sings, tells stories, and plays with the baby until he finally falls asleep. Then, will can go play baseball. Shows how sisters and brothers can take care of each other.

Other Information: Easy to read, pictures are not the best, but story has a good point.

Type: picture book, with extensive text.
**Summary:** Willie stops giving hugs to this family and friends after his friend makes fun of hugging. After awhile Willie misses hugging his family and sneaks around hugging anything, even a bath towel. His sister tells him that he "is not the hugging type" which bothers him. He then begins to give hugs again, regardless of what his friend says.

**Other Information:** Could be used in the friendship unit or on being OK. Afro-American family.

**Type:** picture book, with extensive text and mini chapters, 2-4.

**Summary:** Freddy is the middle child and feels like he is not very special. He finally gets his chance to do something to make him a unique person in his family. He gets the part of the green kangaroo in the fifth and sixth grade play and becomes a star.

**Other Information:** Could use book for unit on self esteem.

**Type:** picture book, predictable pattern, extensive text, K-3.

**Summary:** A little boy goes out to find a mommy, but instead he finds a teddy bear, an uncle, etc., who all help him try to find a mommy. In the end he does find a woman who wanted a boy and then they search out a daddy.

**Other Information:** Somewhat of a corny ending, oversimplified with the finding of the daddy. Nice illustrations.

**Type:** picture book, easy to read, K-3.

**Summary:** Francis was sad when her mother and father seemed to pay more attention to their new baby sister Gloria. Francis finally runs away to under the dinning room table. Her parents comment how lonely it is without her and how they could not be a family. In the end Francis realizes she is still special and is part of the family.
**Other Information:** Could be used for a unit on rhyme.

**Type:** picture book, easy to read, K-3.

**Summary:** Mrs. Piggott did the cooking, cleaning, and went to work. Her husband and two sons, Simon and Patrick, did nothing to help with the work. One day Mrs. Piggott leaves a note saying that they were pigs, and she left. They finally realized how much they needed her and they began to fend for their own. She came back and they all became appreciative and cooperative in household chores and work.

**Other Information:** Shows roles in families, working moms.

**Type:** Picture book, beautiful pictures, 1-4.

**Summary:** Charlie builds his own make believe house out of clay and garbage that he finds in the streets where he lives. He even makes his own bedroom. Charlie uses his imagination to make believe that it is his house rather than the shelter he lives in.

**Other Information:** Story takes place in a South African township.

**Type:** Picture book, easy to read, K-3

**Summary:** A little Eskimo boy sits on his mother’s lap and soon brings in many other toys. When his baby sister wants to join on her lap, he does not think there will be any room, but the mother shows how there is always enough room.

**Other Information:** Shows the jealous feelings that siblings often get, somewhat of a predictable pattern book.

**Type:** picture book, easy to read, meaning could benefit all ages.

**Summary:** A little boy asks is it fair that he has no brothers
and sisters and other similar questions. He then looks at the benefits of being an only child.

**Other Information:** Nice pictures. Addresses of only child issues well like having to cheer mom and dad up and similar problems.

**Type:** picture book, easy to read, predictable pattern, 1-3.

**Summary:** A little girl recalls her experiences from her childhood when she was young in the mountains. Things like what she ate, where she played, and related memories are included. It ends with the thought that she was very content in the mountains and did not want to go anywhere else.

**Other Information:** Caldecott Honor Book.

**Type:** picture book, easy to read, K-2.

**Summary:** A little girl leaves her grandmother's house and is amazed how the moon follows her all the way home, even in the speeding car. When she falls asleep she thinks about her personal moon as her mother, father, and grandmother all watching her, all the time.

**Other Information:** Good for unit on moons/solar system, somewhat hard to keep interested in.

**Type:** picture book, not typical pictures but nice, predictable pattern, K-3.

**Summary:** A little child reflects about the scenery, sunsets, and camping experience that she has with her Grandpa in the mountains.

**Other Information:** Book jacket makes note that it occurs in the Rocky mountains. Good for a unit on geography or different land types.

**42. Book Information:** Soya, Kiyoshi. illustrated by Akiko

**Type:** picture book, predictable, easy to read, K-1.

**Summary:** A little girl was playing outside when it began to rain, so she took cover under some leaves. Soon other insects and animals joined her and it became her second family. When the sun came out she returned to her own family.

**Type:** picture book, easy to read, 1-3.

**Summary:** A little girl helps her Grandma who lives in the city do laundry. They climb the steps to the roof, hang the laundry, and spend the day out on the roof. Shows urban lifestyles.

**Type:** picture book with extensive text, 2-5.

**Summary:** A little Vietnamese girl named Ut comes to America with her family, everyone except her mother. Everyone laughs at Ut because she can not speak English very well and dresses different. Finally one little boy writes Ut’s story and the principal shares it with the whole school. The school decides to have a Vietnamese fair to make money to sent for Ut’s mother. In the end they are reunited.

**Other Information:** Good information about some Vietnam history, shows family different then American family.

**Type:** picture book, easy to read, predictable pattern, K-1.

**Summary:** The story shows how relatives packed up their car and drove for hours to visit relatives far away. When they got there, eating, hugging, and playing took place. Then they left and were sad about leaving.

**Other Information:** Caldecott Honor Book.

46. **Book Information:** Sanders, Scott Russell. illustrated

**Type:** beautiful picture book, easy to read, 2-4.

**Summary:** This is a story about a family of seven who is settling in the west during the settlement time. Their hardships are shown and their different family life of rough times and surviving are shown.

**Other Information:** Could be used for a unit on survival.

**Type:** picture book, easy to read, predictable, K-2.

**Summary:** Two little kids prepare for Christmas while their grandmother is out in Africa doing crazy things trying to get home in time for Christmas. In the end she makes it and brings unusual animals as presents for the kids.

**Other Information:** Good for a unit on Christmas or patience.

**Type:** picture book, easy to read, predictable, nice illustrations, K-2.

**Summary:** Leon was sleeping while his family and sister were getting ready for her wedding. When he awoke he was the errand boy and ended up looking like a bride in the end.

**Other Information:** Afro-American characters.

**Type:** picture book, beautiful illustrations, K-3.

**Summary:** A little girl goes to spend the summer with her grandmother. The summer is organized and the girl knows it is time to leave when a certain fruit is ready to be picked from the garden. Their special relationship and outings are shown in the story.

50. **Book Information:** Olson, Arielle North. illustrated by Elaine Wentworth. *The Lighthouse Keeper’s Daughter.* Boston:

**Type:** picture book with extensive text, beautiful illustrations, 3-5.

**Summary:** Miranda is a little girl who must light the oil lamps in the lighthouse while her father is gone to get food from another island. Miranda reflects on how her family made it to the island and how she always wanted to plant a garden. In the end the father safely returns and she grows a garden.

**Other Information:** Shows how families stick together and help each other out.

**Type:** picture book, easy to read, K-2.

**Summary:** Eric and Karin go to daycare together. Karin shows Eric all the ropes, he feels small and sad when she gets ready to start real school. He soon learns he isn’t so small and can help the new kids at his daycare.

**Type:** picture book, easy to read, K-3, humorous.

**Summary:** A little girl is weary of her new neighbors. After eating dinner there she learns that her new friend’s father is a giant. The advantages of having a father who is a giant are shown. The friend is adopted.

**Other Information:** One of characters is Afro-American.

**Type:** picture book, easy to read, K-2.

**Summary:** The likes and dislikes of two sisters are shown. In the end it is the love they share as sisters that makes them special.

**Other Information:** black and white pencil type illustrations.

Summary: The pictures show a mouse family who just had a new baby. The eight other brothers and sisters are very happy, except for the youngest. In the end the youngest realizes that he will not be forgotten, but has a new place in the family.

Type: picture book with text, 1-4.

Summary: A little girl has the chance to spend the week after Christmas with her Grandma. They do many exciting things like feed the birds and collect wood since their electricity went out during a snow storm. Grandma also finds her mother's skates to try on the little girl and promises her that she can come back whenever even if the skates do not fit.

Type: picture book with extensive text, beautiful illustrations, 3-5.

Summary: A Native American boy and his grandfather sit around a campfire while the grandfather tells the boy of his birth and growing up. The boy tells the grandfather that he never wants him to leave him, but the grandfather tells him that his heritage will give him strength.

Other Information: Shows some Native American traditions like the naming ceremony and counting rope.

Type: picture book, predictable, could be sung, K-2.

Summary: A little girl who wants a china doll suggests that they sell her father's bed to get money for the doll. Then the story asks where the father will sleep and continues in a predictable story pattern.

Other Information: The story is adapted from an Ozark children's song.

58. Book Information: Zolotow, Charlotte. illustrated by

**Type:** picture book, easy to read, predictable, K-1.

**Summary:** A little boy tells all the things he will do for his sister when they are older, like building her a castle or building her a bridge.

**Type:** easy to read, picture book, predictable, K-2.

**Summary:** A big sister shows and tells her little sister what to do all the time. Finally the little sister runs on her own to the meadow to be alone. The big sister is very sad and scared when she finally finds the little sister and from that day on they both decide to take care of each other.

**Type:** picture book with extensive text, 2-4.

**Summary:** A white little girl becomes friends with Baptist Afro-Americans and they allow their grandmother to be her grandmother also. She goes to their Baptist church sometimes and then has chicken dinner with them on Sundays. The kids really want to get her a hat she loved and sold Ukrainian eggs to get enough money.

**Other Information:** True story, real pictures are used in the drawn in pictures frames throughout the book, wonderful illustrations.

**Type:** picture book with extensive text, big illustrations, 2-4.

**Summary:** Twin brothers get separated from their parents during a war so they try to find odd jobs to survive, but they always fight and get into trouble. One day a tailor, Nathan, takes the boys in and teaches them his trade. When he dies they worry about their future, but continue to tailor clothes. One customer invites the boys to England to meet the queen since they did such a nice job sewing his suit. When they get there, they are disguised as old men, their real parents see through the disguise and are happy that they found their
children.

Other Information: Could be used for a unit on reunions or sibling rivalry.

Type: picture book with extensive text, 2-4.

Summary: While a mom cleans the house she asks her son to take care of their two year old sister. He soon learns how much work she is and gets angry at her when she spills her milk or destroys his toys. Then the little sister disappeared and he was very worried. In the end the mom and the brother find the little girl asleep. He is very thankful when they find her.

Other Information: Characters are Afro-American.

Type: picture book with extensive text, K-3.

Summary: A mother animal is worried because she does not feel well and has so much to do. It is her son’s birthday and she has many preparations, including making the cake. In the end, the father animal and siblings all make her go to be and they prepare for the party.
