Preface	xv
1 Euclidean Geometry	1
1.1 Overview and History	1
1.1.1 The Pythagoreans and Zeno	2
1.1.2 Plato and Aristotle	4
1.1.3 Exercises for Section 1.1	5
1.2 Euclid's Approach to Geometry I: Congruence and Constructions	10
1.2.1 Congruence	11
1.2.2 Constructions	12
1.2.3 Equality of Measure	15
1.2.4 The Greek Legacy	16
1.2.5 Exercises for Section 1.2	17
1.2.6 Archimedes	25
1.3 Euclid's Approach II: Parallel Lines	26
1.3.1 Exercises for Section 1.3	30
1.4 Similar Figures	33
1.4.1 Exercises for Section 1.4	37
1.5 Three-Dimensional Geometry	42
1.5.1 Polyhedra	42
1.5.2 Geodesic Domes	46
1.5.3 The Geometry of the Sphere	48
1.5.4 Exercises for Section 1.5	51
1.5.5 Buckminster Fuller	59
1.5.6 Projects for Chapter 1	59
1.5.7 Suggested Readings	65
2 Axiomatic Systems	67
2.1 From Euclid to Modern Axiomatics	67
2.1.1 Overview and History	67
2.1.2 Axiomatic Systems	68
2.1.3 A Simplified Axiomatic System	71
2.1.4 Exercises for Section 2.1	73

2.2	Axiomatic Systems for Euclidean Geometry	75
2.2.1	SMSG Postulates	76
2.2.2	Hilbert's Axioms	77
2.2.3	Exercises for Section 2.2	78
2.2.4	David Hilbert	81
2.3	Models and Metamathematics	82
2.3.1	Exercises for Section 2.3	88
2.3.2	Kurt Gödel	94
2.3.3	Projects for Chapter 2	94
2.3.4	Suggested Readings	96
3	Analytic Geometry	97
3.1	Overview and History	98
3.1.1	The Analytic Model	98
3.1.2	Exercises for Section 3.1	100
3.1.3	René Descartes	104
3.2	Conics and Locus Problems	104
3.2.1	Exercises for Section 3.2	110
3.2.2	Pierre de Fermat	114
3.3	Further Topics in Analytic Geometry	114
3.3.1	Parametric Equations	114
3.3.2	Polar Coordinates	116
3.3.3	Barycentric Coordinates	118
3.3.4	Other Analytic Geometries	120
3.3.5	Exercises for Section 3.3	121
3.4	Curves in Computer-Aided Design	126
3.4.1	Exercises for Section 3.4	131
3.5	Higher Dimensional Analytic Geometry	133
3.5.1	Analytic Geometry in \mathbb{R}^n	133
3.5.2	Regular Polytopes	137
3.5.3	Exercises for Section 3.5	140
3.5.4	Gaspard Monge	145
3.5.5	Projects for Chapter 3	145
3.5.6	Suggested Readings	149
4	Non-Euclidean Geometries	151
4.1	Overview and History	152
4.1.1	The Advent of Hyperbolic Geometry	153
4.1.2	Models of Hyperbolic Geometry	155
4.1.3	Exercises for Section 4.1	158
4.1.4	Carl Friedrich Gauss	160
4.2	Properties of Lines and Omega Triangles	161
4.2.1	Omega Triangles	164
4.2.2	Exercises for Section 4.2	167
4.2.3	Nikolai Lobachevsky and János Bolyai	169

4.3	Saccheri Quadrilaterals and Triangles.....	169
4.3.1	Exercises for Section 4.3.....	173
4.3.2	Omar Khayyam.....	174
4.3.3	Giovanni Girolamo Saccheri.....	175
4.4	Area, Distance, and Designs.....	176
4.4.1	Exercises for Section 4.4.....	183
4.5	Spherical and Single Elliptic Geometries.....	185
4.5.1	Exercises for Section 4.5.....	189
4.5.2	Georg Friedrich Bernhard Riemann.....	189
4.5.3	Projects for Chapter 4.....	190
4.5.4	Suggested Readings.....	192
5	Transformational Geometry	195
5.1	Overview and History.....	195
5.1.1	Exercises for Section 5.1.....	200
5.2	Isometries.....	201
5.2.1	Classifying Isometries.....	203
5.2.2	Congruence and Isometries.....	208
5.2.3	Klein’s Definition of Geometry.....	209
5.2.4	Exercises for Section 5.2.....	209
5.2.5	Felix Klein.....	212
5.3	Algebraic Representation of Transformations.....	213
5.3.1	Isometries.....	217
5.3.2	Exercises for Section 5.3.....	220
5.4	Similarities and Affine Transformations.....	223
5.4.1	Similarities.....	223
5.4.2	Affine Transformations.....	226
5.4.3	Iterated Function Systems.....	228
5.4.4	Exercises for Section 5.4.....	231
5.4.5	Sophus Lie.....	234
5.5	Transformations in Higher Dimensions; Computer-Aided Design.....	235
5.5.1	Isometries of the Sphere.....	235
5.5.2	Transformations in Three and More Dimensions.....	239
5.5.3	Computer-Aided Design and Transformations.....	241
5.5.4	Exercises for Section 5.5.....	243
5.6	Inversions and the Complex Plane.....	245
5.6.1	Exercises for Section 5.6.....	252
5.6.2	Augustus Möbius.....	254
5.6.3	Projects for Chapter 5.....	254
5.6.4	Suggested Readings.....	259
6	Symmetry	261
6.1	Overview and History.....	262
6.1.1	Exercises for Section 6.1.....	264

6.2	Finite Plane Symmetry Groups	267
6.2.1	Exercises for Section 6.2	270
6.3	Symmetry in the Plane.....	272
6.3.1	Frieze Patterns	273
6.3.2	Wallpaper Patterns.....	276
6.3.3	Exercises for Section 6.3	282
6.3.4	M. C. Escher	288
6.4	Symmetries in Higher Dimensions.....	288
6.4.1	Finite Three-Dimensional Symmetry Groups	288
6.4.2	The Crystallographic Groups.....	290
6.4.3	General Finite Symmetry Groups	291
6.4.4	Exercises for Section 6.4	291
6.4.5	H. S. M. Coxeter.....	293
6.5	Symmetry in Science.....	294
6.5.1	Chemical Structure	294
6.5.2	Quasicrystals.....	296
6.5.3	Symmetry and Relativity	297
6.5.4	Exercises for Section 6.5	299
6.5.5	Marjorie Senechal.....	304
6.6	Fractals.....	304
6.6.1	Exercises for Section 6.6	310
6.6.2	Benoit Mandelbrot.....	312
6.6.3	Projects for Chapter 6.....	312
6.6.4	Suggested Readings	314
7	Projective Geometry	317
7.1	Overview and History.....	318
7.1.1	Projective Intuitions	319
7.1.2	Exercises for Section 7.1	322
7.2	Axiomatic Projective Geometry	327
7.2.1	Duality.....	331
7.2.2	Perspectivities and Projectivities.....	332
7.2.3	Exercises for Section 7.2	333
7.2.4	Jean Victor Poncelet.....	336
7.3	Analytic Projective Geometry.....	337
7.3.1	Cross Ratios.....	339
7.3.2	Conics	340
7.3.3	Exercises for Section 7.3	342
7.3.4	Julius Plücker	346
7.4	Projective Transformations	346
7.4.1	Exercises for Section 7.4	351
7.5	Subgeometries	354
7.5.1	Hyperbolic Geometry as a Subgeometry	355
7.5.2	Single Elliptic Geometry as a Subgeometry	358
7.5.3	Affine and Euclidean Geometries as Subgeometries.....	358

7.5.4	Exercises for Section 7.5	359
7.5.5	Arthur Cayley	361
7.6	Projective Space	361
7.6.1	Perspective and Computer-Aided Design	362
7.6.2	Subgeometries of Projective Space	367
7.6.3	Exercises for Section 7.6	368
7.6.4	Projects for Chapter 7	370
7.6.5	Suggested Readings	372
8	Finite Geometries	373
8.1	Overview and History	373
8.1.1	Exercises for Section 8.1	376
8.1.2	Leonhard Euler	377
8.1.3	Rev. Thomas Kirkman	378
8.2	Affine and Projective Planes	378
8.2.1	Affine Planes	378
8.2.2	Projective Planes	382
8.2.3	Exercises for Section 8.2	384
8.3	Design Theory	385
8.3.1	Error-correcting Codes	389
8.3.2	Exercises for Section 8.3	391
8.3.3	Sir Ronald A. Fisher	393
8.4	Finite Analytic Geometry	394
8.4.1	Finite Analytic Planes	395
8.4.2	Ovals in Finite Projective Planes	398
8.4.3	Finite Analytic Spaces	399
8.4.4	Exercises for Section 8.4	401
8.4.5	Projects for Chapter 8	404
8.4.6	Suggested Readings	407
9	Differential Geometry	409
9.1	Overview and History	409
9.1.1	Exercises for Section 9.1	411
9.2	Curves and Curvature	413
9.2.1	Exercise for Section 9.2	420
9.2.2	Sir Isaac Newton	423
9.3	Surfaces and Curvature	424
9.3.1	Surfaces	424
9.3.2	Curvature	426
9.3.3	Surfaces of Revolution	428
9.3.4	Exercises for Section 9.3	429
9.4	Geodesics and the Geometry of Surfaces	432
9.4.1	Geodesics	432
9.4.2	Geodesics on Surfaces of Revolution	435
9.4.3	Arc Length on Surfaces	436

9.4.4	The Gauss-Bonnet Theorem.....	439
9.4.5	Higher Dimensions.....	439
9.4.6	Exercises for Section 9.4.....	441
9.4.7	Albert Einstein.....	444
9.4.8	Projects Chapter 9.....	445
9.4.9	Suggested Readings.....	446
10	Discrete Geometry	447
10.1	Overview and Explorations.....	448
10.1.1	Distances between Points.....	448
10.1.2	Triangulations.....	449
10.1.3	The Art Gallery Problem.....	449
10.1.4	Tilings.....	450
10.1.5	Voronoi Diagrams.....	451
10.1.6	Exercises for Section 10.1.....	453
10.1.7	Paul Erdős.....	457
10.2	Points and Polygons.....	457
10.2.1	Distances between Points.....	457
10.2.2	Triangulations.....	459
10.2.3	The Art Gallery Problem.....	462
10.2.4	Exercises for Section 10.2.....	465
10.3	Tilings.....	469
10.3.1	Exercises for Section 10.3.....	474
10.3.2	Branko Grünbaum.....	477
10.4	Voronoi Diagrams.....	477
10.4.1	Exercises for Section 10.4.....	481
10.4.2	Projects for Chapter 10.....	483
10.4.3	References.....	485
11	Epilogue	487
11.1	Topology.....	488
11.2	Henri Poincaré.....	489
A	Definitions, Postulates, Common Notions, and Propositions from Book I of Euclid's <i>Elements</i>	491
A.1	Definitions.....	491
A.2	The Postulates (Axioms).....	492
A.3	Common Notions.....	492
A.4	The Propositions of Book I.....	492
B	SMSG Axioms for Euclidean Geometry	497
C	Hilbert's Axioms for Euclidean Plane Geometry	499

D	Linear Algebra Summary	503
D.1	Vectors.....	503
D.2	Matrices.....	504
D.3	Determinants.....	505
D.4	Properties of Matrices.....	506
D.5	Eigenvalues and Eigenvectors.....	506
E	Multivariable Calculus Summary	509
E.1	Vector Functions.....	509
E.2	Surfaces.....	509
E.3	Partial Derivatives.....	510
F	Elements of Proofs	511
F.1	Direct Proofs.....	511
F.2	Proofs by Contradiction.....	512
F.3	Induction Proofs.....	512
F.4	Other Remarks on Proofs.....	513
	Answers to Selected Exercises	515
	Acknowledgements	549
	Index	551
